| Name and surname of lecturer (lecturers)    | Subject supervisor   | dr hab. inż. Jan Wajs  |                                     |            |  |         |     |
|   | Teachers   | dr inż. Marcin Jewartowski<br>mgr inż. Piotr Jasiukiewicz<br>dr hab. inż. Michał Klugmann<br>dr inż. Michał Pysz<br>dr inż. Paweł Dąbrowski<br>dr hab. inż. Jan Wajs |                                     |            |  |         |     |
| Lesson types and methods of instruction     | Lesson type  | Lecture  | Tutorial                            | Laboratory | Project  | Seminar | SUM |
|   | Number of study hours  | 15.0   | 15.0                                | 15.0       | 0.0  | 0.0     | 45  |
|   | E-learning hours included: 0.0   |  |                                     |            |  |         |     |
| Learning activity and number of study hours | Learning activity  | Participation in didactic classes included in study plan   | Participation in consultation hours |            | Self-study   |         | SUM |
|   | Number of study hours  | 45   | 2.0                                 |            | 28.0   |         | 75  |
| Subject objectives                          | Student acquire basic knowledge of thermodynamics in the dimension of theory and practice. |  |                                     |            |  |         |     |

|  |   |   |  |
|--|---|---|--|
| Learning outcomes  | Course outcome  | Subject outcome   | Method of verification   |
|  | [K6_W04] has basic knowledge in the field of automation, robotics and control of production processes, has elementary knowledge of electrical and electronic applications in the production system, has basic knowledge of thermodynamics and fluid mechanics as well as the selection and design of hydraulic and pneumatic systems  | Student uses the concepts of thermodynamics and the first and second law of thermodynamics in the analysis of technological and energy processes. Student understands a mechanisms of energy conversion in the engine and pump systems. | [SW1] Assessment of factual knowledge                                |
|  | [K6_K03] is aware of the social role of a graduate of a technical university, understands the importance of non-technical aspects and effects of engineering activities including their impact on the environment and responsibility for decisions, sees the need to formulate and provide the public with information and opinions on the achievements of technology, correctly identifies and resolves dilemmas associated with the job of an engineer  | Student understands a need to improve the thermodynamic efficiency of gas and steam cycles for the protection of natural environment.   | [SK5] Assessment of ability to solve problems that arise in practice |
|  | [K6_U02] has the ability of self-learning and expanding knowledge in a specialized field of engineering production  | Student broadens his knowledge in areas related to the thermodynamics.  | [SU2] Assessment of ability to analyse information                   |
| Subject contents   | <p>LECTURE: Basic concepts. The first law of thermodynamics for closed and open systems. Properties of ideal gases and the gas laws. Thermal and caloric equation of state. Thermodynamic processes of ideal gas. Thermodynamics gas cycles. Entropy. The second law of thermodynamics. Fundamentals of steam thermodynamics.</p> <p>EXERCISES: Simple conversion of energy, heat, work. The balances of power of open or closed thermodynamics systems. State and functions of state of ideal and semi-ideal gases and gas mixtures. Characteristic processes of gases. Gas thermodynamic cycles. Characteristic changes of steam.</p> <p>LABORATORIES: Measurements of thermodynamic parameters: temperature and pressure. Determination of mass flow rate and enthalpy. Energy balance of piston engine. Testing of the refrigerating unit or heat pump.</p> |   |  |
| Prerequisites and co-requisites                                | Knowledge from course of physics and mathematics.   |   |  |
| Assessment methods and criteria                                | Subject passing criteria  | Passing threshold   | Percentage of the final grade  |
|  | Laboratory reports  | 100.0%  | 20.0%  |
|  | Midterm colloquium  | 56.0%   | 30.0%  |
|  | Written test  | 56.0%   | 50.0%  |
| Recommended reading  | Basic literature  | Mayhew R.: Engineering thermodynamics/Work & Heat Transfer. Wiley & Sons Inc. 1993, USA.  |  |
|  | Supplementary literature  | No requirements   |  |
|  | eResources addresses  | Adresy na platformie eNauczanie:  |  |
| Example issues/<br>example questions/<br>tasks being completed | Present equations of first law of thermodynamics. Describe Carnot Cycle. Describe Rankine / Otto / Diesel cycle. Present definitions of second law of thermodynamics.   |   |  |
| Work placement   | Not applicable  |   |  |
