GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Computer-aided manufacturing, PG_00055064
Field of study	Management and Production Engineering

Date of commencement of studies	October 2021	Academic year of realisation of subject	2023/2024
Education level	first-cycle studies	Subject group	Obligatory subject group in the field of study
			Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	3	Language of instruction	Polish
Semester of study	5	ECTS credits	5.0
Learning profile	general academic profile	Assessment form	exam

Conducting unit	Zakład Technologii Maszyn i Automatyzacji Produkcji -> Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology

Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Mariusz Deja
	Teachers	dr inż. Dawid Zieliński
		dr inż. Piotr Sender
		dr hab. inż. Mariusz Deja
		dr inż. Bogdan Ścibiorski

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	15.0	0.0	60
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	60	4.0	61.0	125

Subject objectives	Learning the basic techniques of computer-aided manufacturing, especially programming CNC machines with the use of CAM software

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W05] has systematized, theoretically founded knowledge of modelling the operation of production systems with various structures and forms of their organization and the analysis of production processes using computer simulation methods	Analysis of the production process using computer simulation for a specific manufacturing system.	[SW3] Assessment of knowledge contained in written work and projects
	[K6_K02] is able to interact and work in a group, assuming different roles, can inspire and organize the learning process of others, properly identifies priorities for realization of a task specified by themselves or others	Group design of the technological process with the use of a computer system.	[SK1] Assessment of group work skills
	[K6_W09] knows the general principles of creating and developing forms of individual entrepreneurship and stimulating employee creativity, using knowledge in the field of design, production and operation of machinery and technical devices	The manufacturing process selection depending on the class, type of parts, material, dimensional and shape requirements as well as time and cost of production.	[SW1] Assessment of factual knowledge
	[K6_U09] can use analytical techniques as well as computer simulation and numerical analysis methods in solving specific problems in the field of production engineering, is able to carry out simple engineering tasks related to the production of typical machine parts using widely understood techniques and computer tools, is able to select and apply appropriate methods of project planning and control courses with the use of computer aided means	The student applies the practical use of CAD/CAM systems to present the designed technology for the production of mechanical components	[SU1] Assessment of task fulfilment
	[K6_W03] has knowledge of the design record (the record structure)for the preparation of the manufacturing process documentation and basic knowledge of the implementation and management of production systems, including the principles of designing machine parts and manufacturing technologies using information techniques	The student can design technological processes of typical machine parts for the available means of production, including measuring devices and analysis of experimental results.	[SW2] Assessment of knowledge contained in presentation

Subject contents	Systems for computer-aided manufacturing. Integration of CAD and CAM systems. The exchange of data between systems. Declaration of the workpiece, semi-finished product, tools and fixtures. Definition of machining cycle. Types of turning and milling machining cycles. Selection of machining strategy for specific areas treated. Declaration of cutting parameters. Treatment of free surfaces. High speed machining HSM. Databases in CAM systems. Files containing data access tools. Postprocessors machine tool. Simulation with an analysis of collision. Modification of machining programs. Trends in the development of computer aided manufacturing. Additive technologies and reverse engineering.
Prerequisites and co-requisites	Technical drawing, basics of manufacturing techniques, Computer Aided Design CAD

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Exam	60.0%	40.0%
	Projects	60.0%	20.0%
	Active participation in lectures	80.0%	20.0%
	Practical exercises during laboratories 60.0% 20.0%	60.0%	20.0%

	eResources addresses	Adresy na platformie eNauczanie: Komputerowe wspomaganie wytwarzania (CAM), PG_00055064, ZiIP, 2023/2024, s. zimowy - Moodle ID: 33589 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=33589
Example issues/ example questions/ tasks being completed	1. The range of applications of CAD/CAM manufacturing support systems. 2. Use and integration of CAx techniques. 3. Generating NC programs using the CAD/CAM system. 4. Data exchange - between different systems. 5. Design and technological compliance in computer-aided manufacturing. 6. Object modeling - Feature Modeling. 7. Generating variants of technological solutions. 8. Trends in the development of CAx techniques in the field of computer-aided manufacturing. 9. Integration of CAD / CAM systems with CAE systems. 10. The structure of the standard of working time in terms of computer-aided production. 11. Process planning for turning technology with the use of the CAD/CAM system. 12. Process planning for milling technology with the use of the CAD/CAM system. 13. List the steps to be followed when designing technology using the CAM system (EdgeCam) with the use of 2D models. 14. List the steps to be followed when designing technology using the CAM system (EdgeCam) with the use of 3D models. 15. Designations of the axes of the coordinate system for: turning, milling and designation of additional axes. 16. List the types of models used in CAM systems. 17. List the designs of CNC lathes (positioning of the tool head) and the consequences of tools, spindle revolutions, etc. 18. Characterize the solid models. 19. Characterize the surface models. 20. Present the essential differences between the solid model and the surface model. 21. Characteristics of parametric CAD design. 22. Ways of determining the center of the coordinate system on the workpiece. 23. Ways of determining the blank in CAM systems. 24. Tasks of the technical preparation of production (TPP) department.	
Work placement	Not applicable
