

Subject card

Subject name and code	Applications of Signal Processors, PG_00055273						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2023/2024		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Multimedia Systems -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Grzegorz Szwoch				
	Teachers		dr hab. inż. Grzegorz Szwoch				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		18.0	50
Subject objectives	Accomplishing projects students will gain practical knowledge and experience in operating, programming DSP platforms and operating DSP development environment. In addition, students should learn the basics related to the analysis of technical documentation and learn to review the state of the art associated with the topic. Due to the nature of the subject , students will improve the ability to work in a team. Good work organization and self-discipline is also desirable.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W04] Knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices	The student is able to write a program realizing basic digital signal processing operations (digital filtering, spectral analysis, detection of signal components) and run it on a digital signal processor.	[SW3] Assessment of knowledge contained in written work and projects
	[K6_W35] Knows the concepts of the technique of signal transmission, operation of telecommunications networks and multimedia services and the rules for providing them	The student knows how to write and run a program on a fixed point digital signal processor.	[SW3] Assessment of knowledge contained in written work and projects
	[K6_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study	The student is able to write a program realizing basic digital signal processing operations (digital filtering, spectral analysis, detection of signal components) and run it on a digital signal processor.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information
	[K6_U06] can analyse the operation of components, circuits and systems related to the field of study, measure their parameters and examine technical specifications	The student is able to analyze how the program works and to analyze its output. The student is able to find errors in their own program and to fix them.	[SU2] Assessment of ability to analyse information
Subject contents	1. Learning the Texas Instruments C5535 platform 2. Implementation of FIR filter 3. Implementation of IIR filter 4. Implementation of spectral analysis 5. Testing the developed programs 6. Presentation		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	51.0%	100.0%
Recommended reading	Basic literature	S. W. Smith, Cyfrowe przetwarzanie sygnałów. Praktyczny podręcznik dla inżynierów i naukowców, Wydawnictwo BCT 2007, Original in English	
	Supplementary literature	A. Leśnicki: Technika cyfrowego przetwarzania sygnałów, Wydawnictwo Politechniki Gdańskiej, 2014	
	eResources addresses	Adresy na platformie eNauczanie: Zastosowania procesorów sygnałowych 2024 - Moodle ID: 29769 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=29769	
Example issues/ example questions/ tasks being completed	During the course, students carry out a project in groups of 3 - 4 persons. Each project group at the beginning of the semester receives an evaluation platform TMS320C5535 contains digital signal processor from Texas Instruments. Students get approx. 20 design topics proposed by the teacher, but it is suggested that the project groups have proposed their own topics that are in interests of group members. Topics include simple algorithms that require signal processing (usually audio, but depending on the topic can be any digital data). The implementation of the algorithm is done using C / C ++ development environment: Code Composer Studio. The result of the team's work should be properly working DSP algorithm running on a digital signal processor (depending on the chosen topic, you may be required to implement the same algorithm in MATLAB to verify the results).		
Work placement	Not applicable
