

Subject card

Subject name and code	Intelligent Decision Systems, PG_00055276							
Field of study	Electronics and Telecommunications							
Date of commencement of studies	October 2021		Academic year of realisation of subject		2023/2024			
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery		at the university			
Year of study	3		Language of instruction		Polish			
Semester of study	6		ECTS credits		3.0			
Learning profile	general academic profile		Assessment form		exam			
Conducting unit	Department of Multimedia Systems -> Faculty of Electronics, Telecommunications and Informatics							
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Piotr Szczuko					
	Teachers		dr hab. inż. Piotr Szczuko					
			dr hab. inż. Józef Kotus					
			dr inż. Michał Lech					
			prof. dr hab. inż. Andrzej Czyżewski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0		0.0	45
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	45		4.0		26.0		75
Subject objectives	Aim of the course is t and algorithms of dec AdaBoost classifiers, applying the tools, pr	cision systems, genetic algorit	based on: fuzz hms and other.	zy logic, artifici . The laborator	al neura ies give	netwo	rks, decision	trees,

Introductory issues. General characteristics of susperition and appropriate properson and operations. The notion of expert systems. At Knowledge representation and apporting appropriate. Subject contents Subject contents	rning outcomes	Course outcome	Subject outcome	Method of verification				
Inderstands, to an advanced extent, the construction and provide examples of components and systems related to the field of study, including theories, methods and complex and selected specific issues:	i e	understands, to an advanced extent, methods of supporting processes and functions, specific	theoretical basis, principles of operation and provide examples for decision systems to be applied in selected processes of classification, automatisation and	[SW1] Assessment of factual				
process and function support, specific to the field of study problems. Can apply fuzzy logic, neural networks, decision trees, cascaded classifiers, genetic lagorithms, and other methods. Student knows how to properly prepare datasets, preprocess data, filter data, and adapt in the methods and filter data, and adapt the methods and tools of given methods. Student is able to draw conclusions from conducted experiments. 1. Introductory issues. General characteristics of soft computing, machine learning, cognitive method algorithms. The notion of expert sys-tem. Methodological fundamentals of automatic knowledge discount of the properties of the properties. The properties of the properties. The properties of the	t t r	understands, to an advanced extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues -	theoretical basis, principles of operation and provide examples for decision systems, based on fuzzy logic, neural networks, decision trees, cascaded classifiers, genetic algorithms, and	[SW1] Assessment of factual knowledge				
algorithms. The notion of expert sys-tem. Methodological fundamentals of automatic knowledge faces causing. Machine learning. 2. Knowledge representation and discovery. Data types and data pre cessing. Methods for attribute quantizing. Blind, heuristic and non-deterministic search. Agents. 3. Knowledge representation - Fuzzy logic I. Fundamentals of fuzzy logic. Fuzzy interpreter, Fuzzy decides systems. 4. Knowledge representation - Fuzzy logic II. Fuzzification. Rule aggregation. Methods of defuzzyfyring. Fuzzy Takagi-Sugeno systems. Examples and applications of fuzzy logic systems. 5. Knowledge representation III Rough Sets theory. Non-Cantor set theory interpretation. Selected non-Boolean logic systems and their applications. Dempster-Schafer theory elements. 6. Intrepreting of p conflicting data. Methods of reducts determin-ing inducing certain rules. Methods of inducing uncerta Decision system based on rough sets. 7. Machine learning I. Supervised learning. Unsupervised lea Behavioral learning, Inductive learning, Methods based on similarly. Decision trees. 8. Machine learning enter a neural networks. Unlateral neural networks. Classic form of error backpropagation algorithm. Trainin methods of single layer neural networks. Methods of weights initializing. Methods of learning rate del Optimal NN architecture selection. 9. Machine learning Genetic algorithms. Fundamentals and characteristics of genetic algorithms. Basic genetic operators. Reproduction. Crossing-over. Mutation Machine learning VI Comparison of genetic algorithms with other optimising methods. Evolutionary computing. Examples of genetic algorithms applications, Expert systems. Eacts and heuristics. Select knowledge represent-tation methods. Knowledge acquisition. Interpreting, planning, prognos-ing, con diagnostics, testing and designing systems. 11. Expert systems constructions and architectures. Programming language-so of expert systems. 12. Selected applications of machine learning and expert systems in tele-ecommunications. Automatic anal		process and function support,	and algorithms in practical problems. Can apply fuzzy logic, neural networks, decision trees, cascaded classifiers, genetic algorithms, and other methods. Student knows how to properly prepare datasets, preprocess data, filter data, and adapt for given methods. Student is able to draw conclusions from conducted	fulfilment [SU2] Assessment of ability to analyse information [SU4] Assessment of ability to
