|   | To familiarize oneself with the branch design issues in the field of building technical equipment are influence on the architecture of the object.  Acquiring skills of analyzing external conditions for the designed object and preparing it for install properly selected building installations with it. |  |  |                                     |  |   |           |     |
| Learning outcomes                           | Course outcome   |  | Subject outcome  |                                     | Method of verification   |   |           |     |
|   | urban planning in the context of the multi-discipline character of architectural and urban design; laws and procedures necessary to implement building designs; estimation of costs principles, project management, cost control methodology and principles of implementing a construction project           |  | Understanding of the complex issues of architecture and urban planning in the context of architectural design, taking into account the various industries related to construction.  Ability to analyze and interpret specific installation requirements and their integration into architectural design, ensuring harmonious and effective collaboration with other industry professionals.  Knowledge of current legislation and procedures necessary for building projects, including installation issues. |                                     | [SW3] Assessment of knowledge contained in written work and projects |   |           |     |
|   | [K6_U02] is able to design an architectural object or a simple urban complex that meets the aesthetic and technical requirements   |  | Ability to effectively design buildings, taking into account the optimal arrangement of installations inside the building, ensuring both functionality and architectural aesthetics. Knows how to verify the correctness of the adopted design solutions in terms of the feasibility of building installations in the building.  |                                     |  | [SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject |           |     |

| Subject contents   | In the course of classes, students carry out assigned design tasks on architectural issues related to the preparation of the object for installation of various types of building systems with it.  The general scope of design tasks performed in class: - designed installations in the building - survey of installations present in the building - analysis of the floor plan containing technical rooms - analysis of the roof projection with indication of the location of installation elements - mechanical ventilation in the building. |  |                               |  |  |  |  |
