GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Mathematics II, PG_00055648		
Field of study	Architecture		
Date of commencement of studies	October 2021	Academic year of realisation of subject	2021/2022
Education level	first-cycle studies	Subject group	Obligatory subject group in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	English
Semester of study	2	ECTS credits	3.0
Learning profile	general academic profile	Assessment form	exam
Conducting unit	Faculty of Electronics, Telecommunications and Informatics		
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Magdalena Łapińska	
	Teachers	dr inż. Magdalena Łapińska	

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	15.0	30.0	0.0	0.0	0.0	45

E-learning hours included: 0.0

Adresy na platformie eNauczanie:

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	45	6.0	24.0	75

Subject objectives

Students obtain competence in using methods of mathematical analysis (single variable calculus) and knowledge how to solve simple problems that are found in the field of engineering, in particular connected to data engineering.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K6_W01] knows and understands construction problems, building and engineering issues related to building design; principles, solutions, constructions and building materials used in simple engineering tasks in the field of architectural and urban design	Student defines basic concepts of differential and integral calculus on single-variable function. Student gives the graphical interpretation of definite integral. Student lists geometrical applications of definite integrals	[SW1] Assessment of factual knowledge
[K6_U04] is able to use analytical methods to formulate and solve project tasks	Student applies the concepts of limit, continuity, and derivatives of functions to solve curve sketching problems. Student uses definite integral to solve geometrical problems	[SU4] Assessment of ability to use methods and tools

<table>
<tr><td>Subject contents</td><td>
• Partial derivatives
• Double integral over a rectangular region. Change of variables in double integral. Applications
• Continuity.
• Derivative of a function of one variable. Geometrical and physical interpretation. Basic differentiation formulas.
• Product, quotient, and chain rules.
• Applications of differentiation. Optimization. Concavity.
• Indefinite integral. Basic formulas. Integration by parts, by substitution
• Definite integral. Geometrical interpretation. Fundamental Theorem of Calculus.
• Geometrical applications of definite integrals: areas, volumes, lengths.
• Partial derivatives
• Double integral over rectangular and normal regions. Change of variables in double integral. Applications
