

## GDAŃSK UNIVERSITY

## Subject card

Subject name and code	Technics of material manufacturing, PG_00055749								
Field of study	Mechanical and Medical Engineering								
Date of commencement of studies	October 2021		Academic year of realisation of subject			2022/2023			
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study			
						Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	2		Language of instruction			Polish			
Semester of study	3		ECTS credits			5.0			
Learning profile	general academic profile		Assessment form			exam			
Conducting unit	Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology								
Name and surname	Subject supervisor	dr inż. Michał Landowski							
of lecturer (lecturers)	Teachers		dr inż. Michał Landowski						
			dr inż. Aleksandra Świerczyńska						
			mgr inż. Adrian Wolski						
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
of instruction	Number of study hours	30.0	0.0	30.0	0.0		0.0	60	
	E-learning hours inclu	uded: 0.0							
Learning activity and number of study hours	Learning activity Participation in o classes included plan		n didactic led in study	Jactic Participation in n study consultation hours		Self-study		SUM	
	Number of study hours	60	4.0		61.0		125		
Subject objectives	The aim of the course is to obtain basic knowledge of metal welding, casting and metal forming.								
Learning outcomes	Course outcome		Subject outcome			Method of verification			
	[K6_W06] he/she has basic knowledge in the fields of automatics and mechanical system robotics or electrical engineering and electronics		Student knows automatic and robotic welding and forming processes. Recognizes their advantages and areas of application.			[SW1] Assessment of factual knowledge			
	[K6_W10] he/she has knowledge in the field of machine part manufacturing and metrology		Describes the metallurgical processes of ferrous and non- ferrous alloys. Presents the casting process. Classifies and recognizes plastic forming processes. Defines the processes of joining metals. Distinguishes between methods of welding and cutting metals.			[SW1] Assessment of factual knowledge			
	[K6_U04] he/she is able to use basic medical apparatus and methods to assess measurement errors		Can assess the correctness of conducted measurements and their usefulness.			[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools			

Subject contents	LECTURE:						
	Metallurgy of metals and their alloys. Pig iron metallurgy. Steel metallurgy. Casting manufacturing methods. Manufacturing of sand castings by hand and machine. Molding sands. Automation and mechanization of forming and producing cores. Special methods of making molds and cores. Special casting methods. Basics of plastic working. Plastic deformation of metals. The influence of plastic deformation on the properties of metals. Classification of plastic working processes. Metal rolling. Rolling of billets and slabs. Rolling of sections. Rolling of pipes. Forging and ironing. Forging and pressing machines. Open-die forging. Die forging. Classification of pressing processes. Metal cutting. Metal bending. Multiple and simultaneous pressing. Construction of a typical die.						
	Classification of welding processes. Outline of welding thermal processes, welding thermal cycle. Phase transformations in the weld and in the heat affected zone. Definition of weldability. Basic materials and consumables for welding. Basics of the development of welding technology. Gas welding. MMA welding. Submerged arc welding. TIG welding. Shielding gases. Gas-shielded welding with the MIG/MAG method. Welding with flux cored wires. Pulsed arc welding. Laser, plasma and electron welding. Electric resistance welding. Basic process parameters. Other welding methods. Thermal cutting methods: oxygen cutting, plasma cutting. Laser beam cutting. Welding deformations and stresses and methods of their reduction. Control of welded joints, definitions of welding imperfections and methods of their detection.						
	LABORATORY:						
	Preparation of the production of castings. Making forms using the split and non-split model. Plastic working machines. Influence of crushing on the mechanical properties of metals. Rolling. Plastic bending of profiles and pipes. Pressing of non-unfolding coatings.						
	Manual welding with covered electrodes, automatic submerged arc welding. GMAW and GTAW welding. Resistance welding. Gas welding and cutting. Construction of a welded joint. Imperfections of welded joints.						
Prerequisites and co-requisites	Basic knowledge of physics, chemistry, materials science, electrical engineering and mechanics.						
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade				
and criteria	Short tests at laboratories	56.0%	20.0%				
	Final test	56.0%	80.0%
