

Subject card

Subject name and code		Steam and gas turbines, PG_00055896						
Field of study		Power Engineering, Power Engineering, Power Engineering						
Date of commencement of studies		October 2021	Academic year of realisation of subject			2023/2024		
Education level		first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study		Full-time studies	Mode of delivery			at the university		
Year of study		3	Language of instruction			Polish		
Semester of study		5	ECTS credits			6.0		
Learning profile		general academic profile	Assessment form			exam		
Conducting unit		Department of Energy and Industrial Apparatus -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)		Subject supervisor		prof. dr hab. inż. Krzysztof Kosowski				
		Teachers						
Lesson types and methods of instruction		Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
		Number of study hours	45.0	15.0	15.0	0.0	0.0	75
		E-learning hours included: 0.0						
Learning activity and number of study hours		Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
		Number of study hours	75	6.0		69.0		150
Subject objectives		Present the principles of turbomachinery theory and design.						
Learning outcomes		Course outcome		Subject outcome		Method of verification		
		[K6_W09] knows the dangers of electrical devices and the principles of protection against them, has basic knowledge of heat exchangers, has basic knowledge of power equipment such as pumps, compressors, turbines, combustion engines, boilers, pipelines and their accessories and methods of their selection depending on the needs		Students know: - fundamentals of steam turbines, gas turbines and compressors, - the main parameters of turbomachinery,		[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
		[K6_W02] has a basic knowledge of physics (including optics, electricity and magnetism), chemistry, technical thermodynamics, fluid mechanics and general mechanics needed to understand and describe the basic phenomena occurring in devices and systems, energy plants and transmission networks and their environment		Students know: - fundamentals of thermodynamic cycles of power plants with steam and gas turbines , - theory of turbine stage, energy losses in turbines, - multi stage turbines		[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
		[K6_U07] is able to use basic knowledge of fluid flow machines and methods related to their design in an analytical and numerical approach to the preliminary design of an energy installation		Students can perform preliminary design calculations of turbine power plants		[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject		
Subject contents		LECTURE: STEAM AND GAS TURBINES: Actualizing power cycles. The Carnot cycle: cycle and heat flow diagrams. Comparison of steam, gas, and combined cycle efficiencies. The Brayton cycle. The Rankine cycle. Methods for carnotization of cycles. The steam-gas cycle. Effect of process irreversibilities on cycle efficiency. Efficiency of the power plant. Purpose of main components of steam and gas turbines. Principle of operation of a turbine stage. Course of the thermodynamic process in a turbine stage. Characteristics of turbine stages. LABORATORY: Measurements of model hydraulic turbine operating parameters. Preparation of the I propeller water turbine characteristics. Preparation of the universal characteristic of Kaplan turbine.						

Prerequisites and co-requisites	Fluid Mechanics, Thermodynamics		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Lecture written test	60.0%	70.0%
	Laboratory experiment reports	100.0%	30.0%
Recommended reading	Basic literature	<p>1. Perycz S.: Turbiny parowe i gazowe. Maszyny przepływowe tom 10. Zakład Narodowy im. Ossolińskich Wydawnictwo Polskiej Akademii Nauk. Wrocław 1992.</p> <p>32 Kosowski K. at al, Steam and Gas turbines, Alstom</p>	
	Supplementary literature	No requirements	
	eResources addresses		
Example issues/ example questions/ tasks being completed			
Work placement	Not applicable
