

Subject card

Subject name and code	Steam and gas turbines, PG_00055896								
Field of study	Power Engineering, Power Engineering								
Date of commencement of studies	October 2021		Academic year of realisation of subject			2023/2024			
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study			
						Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	3		Language of instruction			Polish			
Semester of study	5		ECTS credits			6.0			
Learning profile	general academic profile		Assessment form			exam			
Conducting unit	Department of Energy	Apparatus -> Faculty of Mechanical Engineering and Ship Technology							
Name and surname	Subject supervisor	prof. dr hab. inż. Krzysztof Kosowski							
of lecturer (lecturers)	Teachers		dr inż. Wojciech Włodarski						
			prof. dr hab. inż. Krzysztof Kosowski						
			dr hab. inż. Marian Piwowarski						
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
of instruction	Number of study hours	45.0	15.0	15.0	0.0		0.0	75	
	E-learning hours included: 0.0								
Learning activity and number of study hours	earning activity Participation in classes include plan					Self-study S		SUM	
	Number of study hours	75		6.0		69.0		150	
Subject objectives	Present the principles of turbomachinery theory and design.								
Learning outcomes	Course outcome		Subject outcome			Method of verification			
	[K6_W09] knows the dangers of electrical devices and the principles of protection against them, has basic knowledge of heat exchangers, has basic knowledge of power equipment such as pumps, compressors, turbines, combustion engines, boilers, pipelines and their accessories and methods of their selection depending on the needs		Students know: - fundamentals of steam turbines, gas turbines and compressors, - the main parameters of turbomachinery,			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects			
	[K6_W02] has a basic knowledge of physics (including optics, electricity and magnetism), chemistry, technical thermodynamics, fluid mechanics and general mechanics needed to understand and describe the basic phenomena occurring in devices and systems, energy plants and transmission networks and their environment [K6_U07] is able to use basic knowledge of fluid flow machines and methods related to their design in an analytical and numerical approach to the preliminary design of an energy installation		Students know: - fundamentals of thermodynamic cycles of power plants with steam and gas turbines; - theory of turbine stage, energy losses in turbines, - multi stage turbines Students can perform preliminary design calculations of turbine power plants			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects [SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject			

Data wydruku: 20.04.2024 11:28 Strona 1 z 2

Subject contents	LECTURE: STEAM AND GAS TURBINES: Actualizing power cycles. The Carnot cycle: cycle and heat flow diagrams. Comparison of steam, gas, and combined cycle efficiencies. The Brayton cycle. The Rankine cycle. Methods for carnotization of cycles. The steam-gas cycle. Effect of process irreversibilities on cycle efficiency. Efficiency of the power plant. Purpose of main components of steam and gas turbines. Principle of operation of a turbine stage. Course of the thermodynamic process in a turbine stage. Characteristics of turbine stages. LABORATORY: Measurements of model hydraulic turbine operating parameters. Preparation of the I propeller water turbine characteristics. Preparation of the universal characteristic of Kaplan turbine.						
Prerequisites and co-requisites	Fluid Mechanics, Thermodynamics						
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade				
	Lecture written test	60.0%	70.0%				
	Laboratory experiment reports	100.0%	30.0%				
Recommended reading	Basic literature	Perycz S.: Turbiny parowe i gazowe. Maszyny przepływowe to Zakład Narodowy im. Ossolińskich Wydawnictwo Polskiej Akade Nauk. Wrocław 1992. 32 Kosowski K. at al, Steam and Gas turbines, Alstom					
	Supplementary literature	No requirements					
	eResources addresses	Adresy na platformie eNauczanie:					
		Turbiny parowe i gazowe - laboratorium - Moodle ID: 33693 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=33693					
		Turbiny parowe i gazowe - laboratorium - Moodle ID: 33693 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=33693					
Example issues/ example questions/ tasks being completed							
Work placement	Not applicable
