

Subject card

Subject name and code	Construction and design of heat turbines, PG_00055905						
Field of study	Power Engineering, Power Engineering, Power Engineering						
Date of commencement of studies	October 2021	Academic year of realisation of subject				2023/2024	
Education level	first-cycle studies	Subject group				Optional subject group Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	3	Language of instruction				Polish	
Semester of study	6	ECTS credits				9.0	
Learning profile	general academic profile	Assessment form				exam	
Conducting unit	Institute of Energy -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Jerzy Głuch				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	45.0	30.0	0.0	30.0	0.0	105
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	105		9.0		111.0	225
Subject objectives	Student can apply his knowledge on thermal turbines and their thermal cycles. He can perform preliminary design of a thermal turbine						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K6_U06] is able to use the basic knowledge on the operation of energy equipment in the field of thermal power plants, thermal and energy and heating systems, combustion engines, compressors and rotating machines to assess the technical condition of the system		He can assess the efficiency and basic parameters of the selected technology related to energy conversion, evaluate auxiliary devices in detail and evaluate the project.			[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment	
	[K6_W12] has basic knowledge of the life cycle and repairs of energy equipment in the field of thermal power stations, thermal and energy systems and heating systems, internal combustion engines and compressors as well as rotating machines		He can apply basic knowledge from fluid flow machinery field and from methods of design in analytical and numerical way to primary design of energy systems			[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge	
	[K6_U08] can design the basic parameters of the selected technology related to energy conversion and select auxiliary devices and evaluate the project in terms of technical and economic		He can design basic technology parameters concerning energy conversion and choose auxiliary equipment and evaluate design from technical and economical points of view			[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject	
Subject contents	Rotor design, strength analysis calculations of drum and disk type rotors. Release rotational speed of disk type rotors. Rotor balancing. Design of nozzle disks, strength analysis calculation of nozzle disks. Rotor blades design and their fixing system on the disks. Strength analysis calculation of rotor blades and their fixing system. Blades vibrations. Basics of turbine rotors dynamics. Turbine casings. Internal and external glands. Design of trust and radial bearings						
Prerequisites and co-requisites	Basic knowledge on thermal turbines and their thermal cycles						
Assessment methods and criteria	Subject passing criteria		Passing threshold			Percentage of the final grade	
	lecture - test		60.0%			40.0%	
	project		100.0%			30.0%	
	exercise - test		60.0%			30.0%	

Recommended reading	Basic literature	Perycz S., Turbiny parowe i gazowe, Politechnika Gdańska, Skrypt, Gdańsk 1988 Perycz S., Turbiny parowe i gazowe, Maszyny Przepływowe T. 10, Wydawnictwo Instytutu Maszyn Przepływowych PAN, Gdańsk 1992.
	Supplementary literature	Kosowski K, Introduction to the theory of marine turbines, Wyd. PG Delft University, Gdańsk 2004
	eResources addresses	
Example issues/ example questions/ tasks being completed	Purpose of disc rotor applicztion.	
Work placement	Not applicable
