

Subject card

Subject name and code	High Voltage Technique, PG_00055963								
Field of study	Power Engineering, Power Engineering								
Date of commencement of studies	October 2021		Academic year of realisation of subject			2023/2024			
Education level	first-cycle studies		Subject gro	Subject group			Optional subject group		
						Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	3		Language of instruction			Polish			
Semester of study	6		ECTS credits			2.0			
Learning profile	general academic profile		Assessment form			assessment			
Conducting unit	Katedra Elektrotechn	/ysokich Napięć -> Faculty of Electrical and Control Engineering							
Name and surname	Subject supervisor	dr hab. inż. Marek Olesz							
of lecturer (lecturers)	Teachers		dr inż. Daniel Kowalak						
	dr hab. inż. Marek Olesz								
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
of instruction	Number of study hours	15.0	0.0	15.0	.0 0.0		0.0	30	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	ctivity Participation ir classes include plan		Participation in consultation hours		Self-study		SUM	
	Number of study hours	30		2.0		18.0		50	
Subject objectives	Knowledge of the phenomena occurring in high-voltage insulation systems								
Learning outcomes	Course out	Course outcome		Subject outcome			Method of verification		
	[K6_W05] has structured knowledge in the field of electrical engineering and electronics, necessary to understand the basics of operation and selection of electrical machines, electricity transmission systems and power electronic devices		The student understands the phenomena occurring in insulation systems and is able to assess their technical condition			[SW1] Assessment of factual knowledge			
	[K6_W03] knows the basics of automation and automatic regulation, knows the principles of the selection of electrical devices, drive systems and their control		The student has basic skills enabling the selection of measuring equipment and safe conduct of basic measurements of high-voltage devices			[SW1] Assessment of factual knowledge			
Subject contents	LECTURE Dielectrics, ionisation processes in gases, forms of dischargs, corona, impuls air strength, effect of field distribution, polarity, symmetry, dimensions, time and frequency on electric strength of gases. Compressed gases. Liquid dielectrics, electric strength, mechanisms of breakdown and applications. Solid dielectrics, mechanisms of breakdown, partial discharges, degradation, dielectric strength of composed insulation systems, surface and gliding discharges. Insulators, application, design, effect of field distribution and humidity, design of HV power cables and terminations. Lightning, basic parameters, overvoltages. Principles and methods of lightning protection, co-ordination of insulation. Principles of diagnostics of insulation. LABORATORY Measurement of AC, DC and impuls high voltages. Effect of voltage distribution on discharge form in air at AC, DC and impuls voltages. Effect of ambient conditions on electric strength of air. Insulator testing in dry conditions and under rain. Insulating oil testing. Study of wave transmission in long lines.								
Prerequisites and co-requisites	knowledge of fundamentals: ordinary and partial differential equations, integral calculus, electromagnetic field theory, kinetic-molecular theory of gases, thermodynamics, atomic structure								
Assessment methods	Subject passing criteria		Passing threshold			Percentage of the final grade			
and criteria			60.0%			40.0%			
		60.0%							
Recommended reading	Basic literature E. Kuffel, W.S. Zaengl and J. Kuffel, High Voltage Engineering Fundamentals. 2000.								

Data wydruku: 13.03.2024 09:45 Strona 1 z 2

	Supplementary literature	M S Naidu and V Kamaraju, High Voltage Engineering,				
	eResources addresses	Adresy na platformie eNauczanie: Technika wysokich napięć [2023/24] - Moodle ID: 35862 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=35862				
Example issues/ example questions/ tasks being completed	10. Discuss the structure of modern 11. Discuss the characteristic paran 12. Propagation of waves voltage p 13. Characterize types of lightning of	and discharge mechanism, na discharges, ides on static spark gap in gases, ive gases, ating liquids, chanism, methods of preventing gliding discharges, medium voltage power cables, meters of the lightning stroke, ower lines, overvoltages in power networks, il lightning protection measures used in the power system,				
Work placement	Not applicable
