

Subject card

Subject name and code	Mathematics 1, PG_00041990						
Field of study	Power Engineering, Power Engineering						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2021/2022		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		English		
Semester of study	1		ECTS credits		6.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Mathematics Center -> Vice-Rector for Education						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Marcin Szyszkowski				
	Teachers		dr Marcin Szyszkowski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	60.0	0.0	0.0	0.0	90
	E-learning hours included: 0.0						
	Adresy na platformie eNauczanie:						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	90		15.0		45.0	150
Subject objectives	Students obtain competence in using methods of mathematical analysis (single variable calculus) and linear algebra, and knowledge how to solve simple problems that are found in the field of engineering.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_K01] is aware of the need for training and self-improvement in the profession of energy and the possibility of further education; can think and act in a creative and entrepreneurial manner; can define priorities for the implementation of an individual or group task		Student can use a computer programme to calculate a needed value. He knows what mathematical apparatus the programme uses to calculate the data.		[SK2] Assessment of progress of work		
	[K6_U02] is able to apply the learned mathematical methods to the analysis and design of elements, systems and energy systems		Student uses various methods to solve systems of linear equations. Student analyzes and solves problems from the area of analytic geometry. Student applies the basic properties of derivatives. Student analyzes the properties of functions with the use of its first and second derivatives. Student applies basic formulas and techniques of integration to calculate indefinite integrals. Student uses basic operations on complex numbers. Student solves the ordinary differential equations of the first and second order.		[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_W01] has basic knowledge of mathematics necessary to describe the phenomena related to the processes of energy conversion and transfer; uses information technology to solve mathematical problems		Assessment of ability to use knowledge gained in the different modules.		[SW1] Assessment of factual knowledge		

Subject contents	<p><u>Elements of linear algebra.</u></p> <ul style="list-style-type: none"> • Matrices and matrix operations. • Determinants and their properties. • Inverse matrix. • Rank of a matrix. Systems of linear equations. <p><u>Analytic geometry in 3-space.</u></p> <ul style="list-style-type: none"> • The vectors, dot product, cross product and triple scalar product and their applications. • Equations of lines and planes <p><u>Elementary functions.</u></p> <ul style="list-style-type: none"> • Linear function • Quadratic function • Polynomials • Power function • Exponential function • Logarithmic function • Cyclometric and trigonometric functions <p><u>Sequences.</u></p> <ul style="list-style-type: none"> • Definition. • Monotone sequences. • Limit of a sequence. <p><u>Differential calculus of one variable functions.</u></p> <ul style="list-style-type: none"> • Applications differential calculus of one variable functions. <p><u>Anti-derivate.</u></p> <ul style="list-style-type: none"> • The substitution method of integration and integration by parts. • Integration of rational, trigonometric and irrational functions. <p><u>Definite integrals</u></p> <ul style="list-style-type: none"> • Application <p><u>Improper integrals.</u></p>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Tests	50.0%	50.0%
	Written final exam	40.0%	50.0%
