# GDAŃSK UNIVERSITY OF TECHNOLOGY

## Subject card

| Subject name and code | , PG_00056121 | | | | | |
|---|---|---|---|---|---|---|
| Field of study | Mechatronics | | | | | |
| Date of commencement of studies | October 2021 | | Academic year of realisation of subject | | 2023/2024 | |
| Education level | first-cycle studies | | Subject group | | | |
| Mode of study | Full-time studies | | Mode of delivery | | at the university | |
| Year of study | 3 | | Language of instruction | | Polish Polish | |
| Semester of study | 6 | | ECTS credits | | 2.0 | |
| Learning profile | general academic profile | | Assessment form | | assessment | |
| Conducting unit | Zakład Technologii Maszyn i Automatyzacji Produkcji -> Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | | dr inż. Mieczysław Siemiątkowski | | | |
| | Teachers | | dr inż. Mieczysław Siemiątkowski | | | |

| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
|---|---|---|---|---|---|---|---|
| | Number of study hours | 15.0 | 0.0 | 15.0 | 0.0 | 0.0 | 30 |
| | E-learning hours included: 0.0 | | | | | | |

| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | Participation in consultation hours | Self-study | SUM |
|---|---|---|---|---|---|
| | Number of study hours | 30 | 0.0 | 0.0 | 30 |

| Subject objectives | Providing basic knowledge concerning the formation and operation of flexible automated production systems, along with related methods and means of production realisation. |
|---|---|

| Learning outcomes | Course outcome | Subject outcome | Method of verification |
|---|---|---|---|
| | [K6_U05] is able to use properly choosen tools to compare design solutions of elements and mechatronics systems according to given application and economic crtierions (e.g. power demand, speed, costs) | Are able to compare design solutions of mechatronic elements and systems suitable for use in flexible manufacturing automation systems, considering standard efficiency, quality and economic criteria, through selecting appropriate engineering methods, techniques and means of industrial automation and computerassistance. | [SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject |
| | [K6_U06] is able to identify and formulate specification of simple, practical engineering tasks, distinctive for mechatronics | Are capable of identifying and specifying a set of engineering tasks concerning the possibility for selection and effective use of practically known devices and design solutions of mechatronic systems in the operation of production segments of assorted production. | [SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools |
| | [K6_W10] has a basic knowledge about development trends in terms of engineering and technical sciences and scientific disciplines: Mechanical Engineering, Automation, Electronics and Electrical Engineering, adequate for Mechatronics curse | Have a structured and theoretically based knowledge of the current status and the latest development trends in the manufacturing of technologically advanced products, automation and electronics means in relation to engineering tasks concerning buiiding the structure and functioning the flexibly automated manufacturing systems. | [SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation |
| | [K6_W08] knows and understands design and production processes of elements and simple mechatronic devices | Have basic knowledge in the area of: flexibly automated manufacturing of advanced products using machine resources and related drives and simple measuring systems equipped with mechatronics means as well as computer tools for the design and operational simulation. | [SW1] Assessment of factual knowledge |

| Subject contents | LECTURE: The essence, significance and development directions of flexible manufacturing automation. Functional structure of flexible manufacturing systems (FMSs). Forms of organisation and FMS layouts. Technical means FMSs. CNC control of machine tools and automatic control. Technical possibilities of modern automation systems. Organisational structure and functions of flexibly automated manufacturing systems. Manufacturing control system architectures and data transmission techniques. Manufacturing information acquisition systems. Characteristics of material flow subsystems. Transport and storage in FMSs. Sub-systems for supplying and manipulating workpieces and tools. Supervision and diagnostics of FMS system components. Production process realisation and control based on MES standards. Methodology of planning and efficiency analysis of ESP applications. Modelling techniques in ESP design and control tasks.

LABORATORY: Automation of CNC machining operations, incl. measurement of tool settings; determining the position of the working system; contact probe measurements. Planning activity cycles of a robot with the material handling operation in a flexible production cell; recognition of manipulation objects and evaluation of its handling capabilities. Modelling and analysis of manufacturing processes using graph modelling, and event networks. Planning organisational structure of a cellular flexible system for manufacturing mechatronic components and simulation-based quantitative analysis of the process flow of a specific product-mix in the FlexSim® system environment. |
|---|---|

| Prerequisites and co-requisites | Knowledge of basic issues within the range of manufacturing technologies and production organisation. |
|---|---|

| Assessment methods and criteria | Subject passing criteria | Passing threshold | Percentage of the final grade |
|---|---|---|---|
| | Reports | 56.0% | 50.0% |
| | Final written colloquium | 56.0% | 50.0% |

| | eResources addresses | Adresy na platformie eNauczanie:<br><br>Elastyczne Systemy Produkcyjne, w/l; Mechatronika, 1.st., SC, sem. 06, letni 2023/2024, (PG_00056121) - Moodle ID: 37016<br>https://enauczanie.pg.edu.pl/moodle/course/view.php?id=37016 |
| Example issues/ example questions/ tasks being completed | 1. Directions in the development of modern processing machines under the conditions of flexibly automated production<br>2. The application of stand-alone and multi-machine layouts in flexible manufacturing systems (FMS).<br>3. Loading and unloading techniques for working centres operation of in FMS automation.<br>4. Typical applications of industrial robots in handling tasks for selected machine tools.<br>5. Basic problems of the circulation of tools and fixtures in ESP systems.<br>6. The range of applications of machining centers (MC) and stand-alone machining stations.<br>7. Basic solutions of part handling devices in flexible manufacture.<br>8. Methods and means for the part smeasurement and process control in FMS.<br>9. Techniques and the measures used in the tools and related equipment storage under the conditions of flexibly automated manufacture.<br>10. Technical means applied to data logging and related process control in  FMS. | |
