

## Subject card

Subject name and code	, PG_00056128						
Field of study	Mechatronics						
Date of commencement of studies	October 2021	Academic year of realisation of subject	2023/2024				
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery	at the university				
Year of study	3	Language of instruction	Polish				
Semester of study	6	ECTS credits	2.0				
Learning profile	general academic profile	Assessment form	assessment				
Conducting unit	Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Mirosław Gerigk					
	Teachers	dr hab. inż. Mirosław Gerigk					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	30	0.0	0.0	30		
Subject objectives	The aim of the lectures is to present to the students the basic technologies associated with development of the unmanned and autonomous vehicles as well as the mechanics of unmanned vehicles including the structure, strength and motion. The main aim is to present the key issues of design of the unmanned vehicles.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W11] has a basic knowledge about the life cycle of mechatronic systems and objects	A student has the basic knowledge on the life cycle of the unmanned vehicles including their mechatronic subsystems. A student has the basic knowledge on the structure, strength and motion of the unmanned vehicles.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects
	[K6_U06] is able to identify and formulate specification of simple, practical engineering tasks, distinctive for mechatronics	A student is able to identify and formulate the simple tasks, concerning the structure, strength and mechanics of motion, as well as on design of unmanned vehicles, and associated with implementations concerning the unmanned vehicles which are closely connected with mechatronics.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
	[K6_U05] is able to use properly chosen tools to compare design solutions of elements and mechatronics systems according to given application and economic criterions (e.g. power demand, speed, costs)	A student is able to choose and use the tools including the methods, models and algorithms to perform the analysis concerning the implemented subsystems of the unmanned vehicles according to the operational criteria. A student is able to select the tools to analyze the strength of structure and mechanics of motion of the unmanned vehicles. A student is able to select the tools for design of the unmanned vehicles.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
	[K6_W10] has a basic knowledge about development trends in terms of engineering and technical sciences and scientific disciplines: Mechanical Engineering, Automation, Electronics and Electrical Engineering, adequate for Mechatronics course	A student has the basic knowledge concerning the further development of sciences, technologies and implementations connected with the unmanned vehicles including the mechanical engineering and particularly including the structure, strength and mechanics of motion of the unmanned vehicles.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects
	[K6_W08] knows and understands design and production processes of elements and simple mechatronic devices	A student has an ability to analyze the basic technologies necessary to design and manufacture the elements and simple mechatronic subsystems for the data unmanned vehicle. A student has the basic abilities to analyze the structure, strength and motion of unmanned vehicles. He has the basic knowledge on design of unmanned vehicles.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects

## Subject contents

The lectures concern, in turn the key technologies associated with the unmanned vehicles:

- autonomous systems
- sensors and effectors
- materials (AI materials, nano-materials)
- energy supply
- innovative propulsion
- IT technologies (communication, navigation, steering)
- stealth
- cosmic and satellite technologies and
- others

Then, the following will be discussed:

0. Methodology of design, methods, models and design system

1. Hull form geometry and arrangement of internal spaces

2. Materials

3. Mass estimation and centre of gravity

- analysis of hydromechanic characteristics

- analysis of strength of structure

4. Energy supply system

5. Propulsion system

6. System of sensors

7. system of effectors

8. Steering and control

9. Navigation system

10. Communication

11. Tests

	12. Others		
Prerequisites and co-requisites	The student should have basic information in the field of applied physics and mathematics, mathematical analysis, numerical methods, mechanics, including kinetics and dynamics, strength of structure, mechatronics, programming and general design.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Half-exam and final exam	56.0%	100.0%
