

Subject card

Subject name and code	Optimization of production process, PG_00056144							
Field of study	Management and Production Engineering							
Date of commencement of studies	October 2021		Academic year of realisation of subject		2022/2023			
Education level	first-cycle studies		Subject group					
Mode of study	Full-time studies		Mode of delivery		at the university			
Year of study	2		Language of instruction		Polish			
Semester of study	4		ECTS credits		7.0			
Learning profile	general academic profile		Assessme	ssessment form		exam		
Conducting unit	Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology							
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Maciej Majewski					
	Teachers		mgr inż. Karolina Chodnicka-Wszelak					
			dr hab. inż. Maciej Majewski					
			dr inż. Mieczysław Siemiątkowski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	30.0	15.0	30.0	15.0		0.0	90
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	90		0.0		0.0		90
Subject objectives	Presentation of methods to optimize production processes using mathematical models. Discussion of methods of empirical research and defining optimization problems as well as creating optimization and statistical models of selected processes.							

Data wydruku: 24.04.2024 16:51 Strona 1 z 3

Learning outcomes	Course outcome	Subject outcome Method of verification				
	[K6_U06] when formulating and solving engineering tasks a student can see aspects of system management and organization of individual and as a team, taking into account the human factor, has necessary peparation for work in an industrial environment, and knows the rules and standards related to occupational health and safety	The student defines problems and creates optimization models and takes into account the technical, technological and economic conditions of selected processes during optimization.	[SU2] Assessment of ability to analyse information			
	[K6_W08] has basic management knowledge, including process and product quality management, and detailed knowledge of integrated and standardized quality, environmental, health and safety management systems	The student has a basic knowledge of planning the implementation and statistical processing of the results of technological experiments.	[SW1] Assessment of factual knowledge			
	[K6_U01] can find the necessary information in professional literature, databases and other sources, knows basic scientific and technical journals in the field of production management, quality and operation management, can integrate the obtained information, formulate conclusions and justify opinions	The student will search the literature for the necessary information to implement the statistical research and production optimization process.	[SU4] Assessment of ability to use methods and tools			
	[K6_W10] has basic knowledge necessary to understand the economic determinants of engineering activities and economic law, to improve the work environment affecting productivity, costs and quality of work	The student understands the relationship of how to optimize production with economic and legal aspects.	[SW3] Assessment of knowledge contained in written work and projects			
	[K6_K01] feels the need for self-realization by learning throughout life, is looking for modern and innovative solutions in their actions, is able to think creatively and act in an entrepreneurial way	During realization of an optimization task, the student is aware of the existing limitations and is able to look for new innovative solutions.	[SK5] Assessment of ability to solve problems that arise in practice			
Subject contents	Introduction to mathematical optimization. Defining optimization problems. Creating optimization models of selected processes. Creating statistical models of selected processes. Optimization methods and examples of optimization tasks. The structure of the manufacturing process. Structural optimization. Parametric optimization. Optimization methods. Optimization criteria. Evaluation of optimization variants. Selection of optimial parameters and treatments.					
Prerequisites						
and co-requisites						
Assessment methods and criteria	Subject passing criteria Written exercises	Passing threshold	Percentage of the final grade			
	Written exercises Written theory	60.0%	25.0% 25.0%			
	Reports form laboratories	60.0%	25.0%			
	Projects	60.0%	25.0%

Example issues/ example questions/ tasks being completed	Fundamentals of mathematical optimization. Defining optimization problems for selected production and logistics processes. Creating optimization models of selected processes. Creating statistical models of selected processes. The use of selected optimization methods and solving examples of optimization problems. Analysis of the structure of the manufacturing process. Development of an example of structural optimization. Developing an example of parametric optimization. Overview and discussion of optimization methods. Overview and discussion of optimization criteria. Evaluation of optimization variants. Selection of optimal parameters and treatments.		
Work placement	Not applicable
