

Subject card

Subject name and code	Ship Theory 2, PG_00051267						
Field of study	Ocean Engineering						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2022/2023		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Przemysław Krata					
	Teachers	dr hab. inż. Przemysław Krata					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	45	5.0		25.0	75	
Subject objectives	The objectives are to outline the general background of hydrostatic calculations applicable to ships, yachts and other floating structures. The introduced stability principles are to constitute the basis for future stability calculations performed during the ship design process.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W05] has an organized knowledge on design, construction and operation of ocean technology objects and systems	The student is able to use the knowledge in the field of ship stability to perform calculations verifying the stability at the initial stage of designing a floating structures.			[SW3] Assessment of knowledge contained in written work and projects		
	[K6_U05] can formulate a simple engineering task and its specification within the range of design, construction and operation of ocean technology objects and systems	The student is able to identify problems related to buoyancy and stability of the ship and is able to outline correctly the area of engineering search for solutions to these problems.			[SU1] Assessment of task fulfilment		
	[K6_W03] has a basic knowledge on hydromechanics, thermodynamics, machine construction, ecology, materials science and electronics necessary to understand the construction and operation principles of ocean technology objects and equipment	The student has a structured knowledge of the static conditions of the ship and the basics of its stability.			[SW1] Assessment of factual knowledge		

Subject contents	<p>Basics of determining hydrostatic curves.</p> <p>Initial stability of the ship.</p> <p>Calculation of the drafts at perpendiculars.</p> <p>Stability at large angles of heel. The static stability curve and its interpretation.</p> <p>Determination of the static angle of heel of the ship.</p> <p>Fundamentals of dynamic stability of a ship.</p>											
Prerequisites and co-requisites	Basic knowledge of physics and technical mechanics. Ability to use selected computational tools.											
Assessment methods and criteria	<table border="1" data-bbox="448 620 1495 689"> <thead> <tr> <th data-bbox="448 620 794 656">Subject passing criteria</th> <th data-bbox="794 620 1141 656">Passing threshold</th> <th data-bbox="1141 620 1495 656">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 656 794 689">assigned task evaluation</td> <td data-bbox="794 656 1141 689">50.0%</td> <td data-bbox="1141 656 1495 689">100.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	assigned task evaluation	50.0%	100.0%			
Subject passing criteria	Passing threshold	Percentage of the final grade										
assigned task evaluation	50.0%	100.0%
