

Subject card

Subject name and code	, PG_00056421						
Field of study	Ocean Engineering						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2022/2023		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		11.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Faculty of Ocean Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Tomasz Mikulski				
	Teachers		dr inż. Jakub Kowalski mgr inż. Paweł Bielski mgr inż. Olga Kazimierska dr hab. inż. Tomasz Mikulski dr inż. Michał Krężelewski mgr inż. Leszek Samson				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	60.0	45.0	15.0	0.0	0.0	120
	E-learning hours included: 0.0						
	Additional information: Lectures, exercises and laboratories are conducted in the system of full-time education.						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	120		15.0		140.0	275
Subject objectives	The aim of the course is to provide theoretical foundations of mechanics and strength regimes of one-dimensional structures (rods, beams). Student after the course should be able to: - determine the distributions of internal forces and moments - determine the stress distribution, - calculate the displacements of one-dimensional structures, - indicate the place of the greatest material effort at typical structure loads, - calculate the effort of material using a variety of strength material hypothesis.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W02] has a basic knowledge in physics, including technical mechanics, fluid mechanics, solid-state physics, optics and acoustics necessary to understand basic physical phenomena occurring in ocean technology	The student has acquired the ability to solve technical problems based on the laws of mechanics and basic material strength analysis.	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects
	[K6_U02] can work individually and in a team, communicate through various techniques in professional environment and also record, analyse, and present the results of work, can estimate the time needed to complete a given task	The student is able to perform strength analyzes of elements of structural systems and ship devices.	[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
Subject contents	<ol style="list-style-type: none">1. Basics assumptions and description of the Strength of Materials problems.2. State of stress and strain: general state of stress and strains, plane stress and plane strain states. Physical relationships between stresses and strains. Hooke's law.3. Axial tension and compression of the rod.4. The internal forces. Statically determinate structures: beams , trusses and frames,frame-truss systems. Cross-sectional axial forces, shear forces, bending moments, torsional moments.5. Moments of inertia of plane figures.6. Bending of beams.7. Torsion of monolithic and thin-walled bars.8. Eccentric tension (compression) of the bar.9. Shear stresses in bending problems.10. Bending line of beam. Euler's equation.11. Buckling of axially compressed rods.12. Strength hypotheses. Complex stress problems.13. Vibrations of a system with one degree of freedom: free and forced vibrations.14. The phenomenon of resonance, vibration damping.15. Introduction to vibrations of systems with many degrees of freedom.		
Prerequisites and co-requisites	The student has passed the following subjects: - Technique Mechanic I		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	exam	50.0%	30.0%
	laboratory	50.0%	20.0%
	exercise	50.0%	50.0%

	Supplementary literature	no data available	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	What differs plane state of stresses of the plane state of strains? What determines elongation of the axially tensioned rod? In which case there is a beam skew bending problem? Describe and review strength hypotheses. What determines the critical force of the compressed rod?		
Work placement	Not applicable
