

Subject card

Subject name and code	CAD - Computer Aided Design, PG_00053771						
Field of study	Engineering Management						
Date of commencement of studies	October 2021	Academic year of realisation of subject				2021/2022	
Education level	first-cycle studies	Subject group				Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	1	Language of instruction				Polish	
Semester of study	1	ECTS credits				3.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Department of Informatics in Management -> Faculty of Management and Economics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Igor Garnik				
	Teachers		dr inż. Igor Garnik				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		40.0	75
Subject objectives	The aim of the course is to familiarize students with the basics of industrial design with the use of specialized CAD / CAM / CAE software. The main goal is to introduce students to the field of technology in which every engineer is constantly involved, as well as to acquire knowledge and skills necessary to communicate with designers and constructors in the process of industrial design.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K6_U06] uses basic theoretical knowledge to solve selected organizational problems, design technical solutions and manage projects, including engineering projects		The student understands the specific of computer-aided design process; knows the rules and standards for creating technical documentation using CAD/CAM/CAE software			[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject	
	[K6_W05] knows the statistical and IT methods and tools that enable the acquisition and presentation of data on the organisation's resources, including technical resources		The student is able to perform technical documentation using the CAD/CAM/CAE software; is able to properly format the prints, visualisations and data sheets; can transfer data between different platforms (CAD/CAM/CAE software, office software).			[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation	
Subject contents	Introduction. Fusion 360 user interface. Modeling of simple solids. Sketching. The use of FORM space. Modification of models and creation of components. Design project management. Assembly of components. Rendering and creating drawing documentation. CAM and CAE elements. Assembly animations.						
Prerequisites and co-requisites	Basic knowledge of engineering drawing, knowledge of computer operating systems						
Assessment methods and criteria	Subject passing criteria		Passing threshold			Percentage of the final grade	
	Practical exercises		60.0%			40.0%	
	Colloquium		60.0%			60.0%	
Recommended reading	Basic literature		1. Exercises shared by the instructors. 2. Software producer's training materials available online.				
	Supplementary literature		1. Any literature on the design with Fusion 360.

Example issues/ example questions/ tasks being completed	<ul style="list-style-type: none"> • Using 3D modeling, follow these steps: <ol style="list-style-type: none"> 1) create a cuboid with a base of a square with a geometric center at the beginning of the coordinate system, with a side of 98 mm and a height of 37 mm 2) set a cylinder with a diameter of 63 mm and a height of 31 mm on the rectangular prism 3) using the SHELL command, convert the solid into a shell with a wall thickness of 5 mm 4) cut the shell in half using the YZ plane 5) create components from both halves and spread them apart • Complete the model of the crank system based on the attached design documentation including the assembly drawing and executive drawings of individual components. 	
Work placement	Not applicable
