

Subject card

Subject name and code	Integrated Circuits Design for Wireless Communication, PG_00048583						
Field of study	Electronics and Telecommunications, Biomedical Engineering, Biomedical Engineering, Biomedical Engineering						
Date of commencement of studies	February 2022	Academic year of realisation of subject			2022/2023		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Microelectronic Systems -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Grzegorz Blakiewicz				
	Teachers		dr hab. inż. Grzegorz Blakiewicz				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	30	4.0		16.0	50	
Subject objectives	Transfer of knowledge of the design and optimization of the main functional blocks in integrated receivers and transmitters for wireless communications. Practicing the design and verification of parameters of functional blocks using computer simulators.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_K02] is ready to provide critical evaluation of received content and to acknowledge the importance of knowledge in solving cognitive and practical problems	He can choose the solution best suited to the project specification.			[SK2] Assessment of progress of work		
	[K7_W03] Knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum.	Knowledge of transceivers architectures. Knowledge of the principles of operation and methods of design the most important functional blocks in transceivers			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
	[K7_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study by:n-appropriate selection of source information and its critical analysis, synthesis, creative interpretation and presentation,n-application of appropriate methods and toolsn	Ability to design and simulate the most important functional blocks in transceivers.			[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		

Subject contents	<ol style="list-style-type: none"> 1. General characteristics of wireless communication systems 2. Survey of receiver architectures in wireless communication systems 3. Survey of transmitter architectures in wireless communication systems 4. Basic parameters and characteristics of functional blocks in signal path 5. Remarks on high frequency integrated circuits design 6. Implementation of integrated low noise high frequency amplifiers 7. Frequency conversion circuits 8. Implementation of integrated high frequency mixers 9. High frequency phase locked loops 10. Implementation of integrated high frequency voltage controlled oscillators 11. Integrated phase detectors and programmable frequency dividers 12. Intermediate frequency and baseband filters 13. Implementation of integrated intermediate frequency filters 14. Implementation of integrated baseband filters 15. Analogue-digital and digital-analogue converters 16. Interface and controlling circuits 17. Final test 		
Prerequisites and co-requisites	No requirements		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Practical exercise	50.0%	30.0%
	Midterm colloquium	50.0%	70.0%
Recommended reading	Basic literature	A. Abidi, P. Gray, R. Meyer, "Integrated Circuits for Wireless Communications" New York 1999	
	Supplementary literature	No requirements	
	eResources addresses		
Example issues/ example questions/ tasks being completed			
Work placement	Not applicable
