GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Optoelectronics, PG_00057030		
Field of study	Mechatronics		
Date of commencement of studies	February 2022	Academic year of realisation of subject	2022/2023
Education level	second-cycle studies	Subject group	Obligatory subject group in the field of study Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	2	ECTS credits	2.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department of Metrology and Optoelectronics -> Faculty of Electronics, Telecommunications and Informatics		
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Marcin Strąkowski	
	Teachers	dr inż. Adam Mazikowski dr inż. Marcin Strąkowski	

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	15.0	0.0	15.0	0.0	0.0	30

E-learning hours included: 0.0

Optoelektronika, WIMiO, Mechatronika II st., sem.02 - 22/23 (PG_00057030) - Moodle ID: 23331
https://enauczanie.pg.edu.pl/moodle/course/view.php?id=23331

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	30	4.0	16.0	50

Subject objectives

The course "Optoelectronics" is for students of mechanical and mechatronics faculties to study the phenomena of optics, optical systems, optical and electronic systems integration, to learn about the selected optoelectronic elements, the applications of modern optical measurement methods, detection of optical signals, technological processes, and optical acquisition, transmition, and information processing systems.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_W10] knows development trends and most important new achievements in technical sciences and science disciplines: Mechanical Engineering, Automation, Electronics and Electrical Engineering and related: Informatics and Materials Engineering	Student knows and is able to apply the latest solutions in the field of optoelectronic systems, in particular light sources, detectors and components of optical guide systems. Has up-to-date knowledge of modern optoelectronic measurement systems.	[SW1] Assessment of factual knowledge
[K7_W04] has detailed, supported by the theory knowledge in terms of electronic circuits, microelectronics and optoelectronics	Student knows the optical phenomena that are the basis for the operation of optical and optoelectronic systems. Analyzes the principles of operation and properties of optoelectronic elements. He/She is able to choose optoelectronic elements for the configuration of the optoelectronic system.	[SW1] Assessment of factual knowledge
[K7_U06] is able to evaluate feasibility and possibility of application of new achievements (technical and technological) in terms of mechatronics	Student acquires and analysis the characteristics of optoelectronic components in time and spectral (frequency) domain, as well as finds relations and correlations between them. He/She is able to design and develop a basic optoelectronic systems.	[SU1] Assessment of task fulfilment

Subject contents

1. Optoelectronic system and components
2. Methods of optical radiation description, radiometry, photometry. Radio- and photometric units.
3. Light guiding in an optical system. Light interactions with matter, absorption, transmission and reflection coefficients.
4. Optical scattering phenomena in optical media
5. Boundary effects in light transmission, Fresnel equations
6. The phenomenon of optical interference.
7. Interferometers, filters
8. Fabry-Pérot resonator
9. Applications of interferometry
10. Light sources: thermal, EL, VF, LED
11. Lasers, conditions for the laser beam emission.
12. Properties of the laser beam, types of lasers, applications.
13. Laser diodes, construction, principle of operation, parameters, characteristics, applications
14. Optical detectors, thermal and photon detectors (PMT, PIN, APD, CCD, CMOS), properties, characteristics, applications
15. Work safety with optical systems
16. Optical systems for visualization of information
17. Construction and classification of optical fibers
18. Basic parameters of optical fibers: numerical aperture, acceptance angle, attenuation
19. Optical fiber with a stepwise refractive index profile
20. Dispersion in optical fibers, influence on transmission properties
21. Optical fiber with a gradient refractive index profile
22. Optical transmission of signals
23. Mono-mode optical fiber, its properties
24. Optical reflectometry OTDR
25. Passive optical elements
26. Designing optoelectronic systems
27. New trends and achievements in optoelectronics

Prerequisites and co-requisites

No other requirements

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Tests during the semester	50.0%	60.0%
Laboratory exercises	50.0%	40.0%
