

Subject card

Subject name and code	Signal and image processing, PG_00057031						
Field of study	Mechatronics						
Date of commencement of studies	February 2022	Academic year of realisation of subject			2022/2023		
Education level	second-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Metrology and Optoelectronics -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Marcin Strąkowski				
	Teachers		dr inż. Marcin Strąkowski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Przetwarzanie sygnałów i obrazów, WIMiO, II st., Mechatronika sem.02 - 22/23 (PG_00057031) - Moodle ID: 23333 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=23333							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	45	2.0	28.0	75		
Subject objectives	Student gains knowledge in the field of advanced methods of processing and analysis of digital signals and images.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W05] has detailed, supported by the theory knowledge in terms of control theory, identification methods, concurrent and real time programming, signal and image processing and Artificial Intelligence		Student has knowledge related to the design and implementation of advanced digital signal and image processing systems. He knows the methods and tools used today for advanced signal and image processing, including noise reduction and adaptive filtering.		[SW1] Assessment of factual knowledge		
	[K7_U06] is able to evaluate feasibility and possibility of application of new achievements (technical and technological) in terms of mechatronics		Chooses and applies methods of noise reduction, filtration and analysis of stochastic digital signals and images correctly.		[SU1] Assessment of task fulfilment		
	[K7_W01] has extended knowledge in terms of selected areas of mathematics, including discrete and applied mathematics, optimisation methods, mathematical and numerical methods essential for: 1) modelling and analysis of nonstationary mechatronics, continuous and discrete time systems as well as physical phenomena; 2) description and analysis of mechatronic systems that include programmable devices 3) description and analysis of signal processing algorithms 4) synthesis of non-stationary mechatronic systems		Student knows the methods of description, modeling and analysis of discrete systems for digital signal and image processing.		[SW1] Assessment of factual knowledge		

Subject contents	Digital filtering of signals and images (including non-uniform sampling), spectral analysis and estimation of power spectral density, higher order spectra, Wiener and Kalman filter, linear and nonlinear adaptive filtering, time-frequency analysis (STFT, wavelet), methods of noise reduction, regression and detection methods according to PCA and SVM algorithms, image processing in measurement applications, vision (stereovision) measurement systems.		
Prerequisites and co-requisites	Knowledge of the basics of digital signal and image processing. Basic knowledge of discrete mathematics.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Tests during semester	50.0%	60.0%
	Completion of all laboratory exercises	50.0%	40.0%
