

Subject card

Subject name and code	Innovative sanitation approaches, PG_00057252						
Field of study	Power Engineering, Power Engineering, Power Engineering						
Date of commencement of studies	February 2022	Academic year of realisation of subject				2021/2022	
Education level	second-cycle studies	Subject group				Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	1	Language of instruction				Polish	
Semester of study	1	ECTS credits				3.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Department of Sanitary Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Przemysław Kowal				
	Teachers		dr inż. Przemysław Kowal dr inż. Joanna Majtacz				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Nowe rozwiązania w technice sanitarnej - Moodle ID: 23421 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=23421							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	45	9.0		21.0		75
Subject objectives	The aim of the classes is to present the basic theoretical knowledge on conventional and modern solutions used in sanitary water and sewage installations, rainwater management, the use of conventional and ecological energy sources. Students will gain practical knowledge of the available technical and material solutions. In addition to presenting theoretical knowledge, another goal of the classes is for students to acquire practical skills in designing sanitary installations.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K7_K71] is able to explain the need to apply knowledge from humanistic, social, economic or legal sciences in order to function in a social environment		The student is able to find and properly use sources of information, legal acts and standards relating to the problem area of designing internal installations			[SK5] Assessment of ability to solve problems that arise in practice [SK1] Assessment of group work skills [SK2] Assessment of progress of work	
	[K7_W10] knows the basic installations of advanced energy systems, transmission networks and internal installations and their impact on the environment		The student is able to use the acquired knowledge of basic sciences to understand the principles of operation and the practical application of knowledge for the design of internal installations with particular emphasis on solutions based on the use of renewable energy sources			[SW3] Assessment of knowledge contained in written work and projects	
	[K7_W02] has extended and deepened knowledge of physics, chemistry, thermodynamics, fluid mechanics, material science, necessary to understand and describe basic thermal and flow phenomena occurring in and around power equipment and systems, transmission networks and internal installations		The student is able to use the acquired knowledge of basic sciences in order to understand the principles of operation and the practical application of knowledge for the design of internal installations			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects	

Subject contents	LECTURES Conventional and modern solutions in water supply systems. Conventional and modern solutions in sanitary sewage systems Conventional energy sources for domestic hot water preparation and central heating C.O. Sanitary techniques using renewable energy sources (RES): Photovoltaic cells; Heat pumps; Solar panels Design and functional issues of fire protection installations Project. Project of a water and sewage internal installations project based on the use of renewable energy and gray water management in accordance with applicable legal regulations, engineering practice and the scope of topics presented in the lectures.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project of the internal installation	60.0%	35.0%
	Lecture - exam	60.0%	65.0%
