

Subject card

Subject name and code	Bionics in energy sector, PG_00057272						
Field of study	Power Engineering, Power Engineering, Power Engineering						
Date of commencement of studies	February 2022	Academic year of realisation of subject				2022/2023	
Education level	second-cycle studies	Subject group				Optional subject group Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	2	Language of instruction				Polish	
Semester of study	3	ECTS credits				4.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Institute of Energy -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Jerzy Głuch				
	Teachers		dr hab. inż. Jerzy Głuch				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	15.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		6.0		49.0	100
Subject objectives	The aim of the course is to understand the basic concepts of bionics / biomimicry. Getting to know the possibilities and selected examples of technologies and solutions taken from living organisms. Awakening the ability to see and appreciate the evolutionary achievements of living organisms in the field of biological processes and their effective use for human needs, including energy. Explaining the nomenclature, scope and area of bionics as an interdisciplinary science.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K7_W03] knows advanced aspects of automation and automatic control of power systems or transmission networks and internal installations		Students know the advanced aspects of automation and automatic regulation of mechanical and energy systems.			[SW1] Assessment of factual knowledge	
	[K7_U02] is able to use known mathematical and numerical methods to analyze and design elements, systems and power transmission networks and internal installations		Students are able to use the knowledge acquired during the course to design elements, systems and energy systems inspired by biological origin.			[SU4] Assessment of ability to use methods and tools	
	[K7_W02] has extended and deepened knowledge of physics, chemistry, thermodynamics, fluid mechanics, material science, necessary to understand and describe basic thermal and flow phenomena occurring in and around power equipment and systems, transmission networks and internal installations		Students have an extended knowledge needed to understand the mechanical and thermo-flow phenomena in bio-inspired energy systems.			[SW1] Assessment of factual knowledge	
Subject contents	Outline, position and division of bionics. History of the development of bionics, examples and measurable effects of "imitating life". Methodology and modeling in bionics. Energy and bionic aspects. Structure and functions of biological systems. Principles of the functioning of living organisms and the possibility of their application in various areas of life, in science, technology and medicine. Bionics in innovative design of machines and devices. Examples of inventions inspired by nature. Descriptions of selected energy technologies viewed and downloaded from nature. Further directions of bionics development.						
Prerequisites and co-requisites	-						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Presentation	100.0%	50.0%
	Test	50.0%	50.0%
Recommended reading	Basic literature	<ol style="list-style-type: none"> 1. Heynert H. Bionika ogólna WNT Warszawa, 1975; 2. Tkacz E., Borys P. Bionika WNT Warszawa, 2006; 3.
