GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Smart Grids, PG_00057334		
Field of study	Power Engineering, Power Engineering, Power Engineering		
Date of commencement of studies	February 2022	Academic year of realisation of subject	2022/2023
Education level	second-cycle studies	Subject group	Optional subject group Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	2	ECTS credits	2.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department of Electrical Power Engineering -> Faculty of Electrical and Control Engineering		
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Zbigniew Lubośny	
	Teachers		

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	15.0	0.0	15.0	0.0	0.0	30

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	30	8.0	12.0	50

Subject objectives

Acquiring knowledge and skills in the operation and control of smartgrids energy networks.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_U06] is able to apply basic and advanced knowledge of power equipment and transmission network and internal installations to the preliminary design of a modern power plant or part thereof	The student knows the rules of the smart grids operation in collaboration with HV power systems.	[SU3] Assessment of ability to use knowledge gained from the subject
[K7_U02] is able to use known mathematical and numerical methods to analyze and design elements, systems and power transmission networks and internal installations	The student is able to apply numerical methods to solve problems of power grids.	[SU4] Assessment of ability to use methods and tools
[K7_W10] knows the basic installations of advanced energy systems, transmission networks and internal installations and their impact on the environment	The student is able to analyze the conditions and requirements of smart grids network operation.	[SW3] Assessment of knowledge contained in written work and projects
[K7_W08] as knowledge about development trends in the field of known technologies and non-technical aspects to solve simple engineering tasks in the field of power systems and equipment or transmission networks and internal installations	The student knows the state and prospects for the development of smart grids.	[SW1] Assessment of factual knowledge

Subject contents

MV and LV electric power grids operation. Parallel and island operating conditions. Photovoltaic and wind systems. Electric vehicle charging systems. Integration with the power system. Design and control. Energy sources and loads control. Smartgrid operation optimization.

Prerequisites and co-requisites

Electric power systems

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
test	60.0%	100.0%
