

Subject card

Subject name and code		Advanced engineering materials, PG_00057437						
Field of study		Mechanical Engineering						
Date of commencement of studies		February 2022	Academic year of realisation of subject			2021/2022		
Education level		second-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study		Part-time studies	Mode of delivery			at the university		
Year of study		1	Language of instruction			Polish		
Semester of study		1	ECTS credits			4.0		
Learning profile		general academic profile	Assessment form			assessment		
Conducting unit		Department of Materials Engineering and Bonding -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)		Subject supervisor		dr inż. Michał Landowski				
		Teachers		dr inż. Michał Landowski dr hab. inż. Dariusz Fydrych dr inż. Aleksandra Świerczyńska dr inż. Grzegorz Gajowiec				
Lesson types and methods of instruction		Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
		Number of study hours	20.0	0.0	10.0	0.0	0.0	30
		E-learning hours included: 0.0						
		Zaawansowane materiały inżynierskie, W/L, MiBM IIst. NST, sem. 01, lato 21/22, PG_00057437 - Moodle ID: 23194 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=23194						
Learning activity and number of study hours		Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
		Number of study hours	30	8.0		62.0		100
Subject objectives		Acquirement of the essential knowledge in modern structural materials and maintain their at industrial work environment.						
Learning outcomes		Course outcome	Subject outcome			Method of verification		
		[K7_U06] when solving engineering problems on design, technology and operation of machines is able to assess and classify typical methods and tools, define systemic and ex-technical aspects using modern calculating methods and design tools or modifying the current ones	Student is able to choose the appropriate material and manufacturing technique based on the operational requirements.			[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject		
		[K7_W04] possesses specialized knowledge on design, construction, properties and testing methods of construction materials	Student knows the basic techniques of material testing. Knows how the manufacturing technology affects the properties of modern engineering materials.			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
		[K7_U08] is able to design a procedural equipment or device compliant with the specifications using a design aid system in the form of a design documentation, selecting the appropriate model, performing critical analysis with the proper selection of tools and technologies	Student is able to design a composite material for specific applications.			[SU2] Assessment of ability to analyse information [SU5] Assessment of ability to present the results of task		

Subject contents	<p>LECTURE:</p> <p>Weldable structural steels AHSS (Advanced High Strength Steels). Modern steel grades for automotive industry. Corrosion-resistant steels: ferritic, austenitic, duplex, and precipitation hardening steels. Surface treatments of the stainless steels needed to prevent corrosion. The causes of corrosion damages of austenitic stainless steel in industrial systems. Low alloy steels operating at elevated temperature. Creep; influence of temperature, time and stresses to mechanical properties of metals. Creep-resisting steels and super alloys on the base of iron, nickel, and cobalt used in power industry, petrochemical or chemical systems. Heat-resisting steels; chemical composition, operating temperature. Refractory metals; Mo, Nb, W, Zr, Hf and their alloys. Materials on the intermetallic phase matrix. Creep-resisting light metal alloys. Wear resistant materials.</p> <p>LABORATORY:</p> <p>1. Weldable structural steels AHSS (Advanced High Strength Steels). Vickers hardness of welded joints. 2. Corrosion-resistant austenitic steels and duplex steels. Case study of austenitic steel damages.</p> <p>3. Composite materials with a metal matrix 4. Fiber composite materials with a polymer matrix 5. Design of structural composite materials.</p>											
Prerequisites and co-requisites	Completed courses: Material Science I and Material Science II											
Assessment methods and criteria	<table border="1" data-bbox="448 725 1487 824"> <thead> <tr> <th data-bbox="448 725 798 757">Subject passing criteria</th> <th data-bbox="802 725 1141 757">Passing threshold</th> <th data-bbox="1145 725 1487 757">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 757 798 788"></td> <td data-bbox="802 757 1141 788">60.0%</td> <td data-bbox="1145 757 1487 788">80.0%</td> </tr> <tr> <td data-bbox="448 788 798 824"></td> <td data-bbox="802 788 1141 824">100.0%</td> <td data-bbox="1145 788 1487 824">20.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade		60.0%	80.0%		100.0%	20.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
	60.0%	80.0%										
	100.0%	20.0%

	eResources addresses											
Example issues/ example questions/ tasks being completed	<p>Weldability of steel, equivalent CEV. Application of the welded carbon steels Strengthening mechanisms of steel. Bainitic steels, alloying elements, TTT diagram, application. Corrosion-resistant austenitic steel, the role of chromium and nickel, essential heat treatment. Examples of modern steel grades for automotive industry.</p>											
Work placement	Not applicable
