

Subject card

Subject name and code	Artificial Intelligence Methods, PG_00057476						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	February 2022	Academic year of realisation of subject			2021/2022		
Education level	second-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			5.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Control Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Roman Śmierzchalski					
	Teachers	prof. dr hab. inż. Roman Śmierzchalski mgr inż. Maria Ferlin Zuzanna Klawikowska dr hab. inż. Kazimierz Duzinkiewicz dr inż. Bartosz Puchalski dr inż. Agnieszka Mikołajczyk-Bareła					
Lesson type and method of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	15.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	60	10.0		55.0		125
Subject objectives	The aim of the course is to introduce students to basic notions and concepts from the field of artificial intelligence.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K7_W05	The student learns basic computational techniques of artificial intelligence (methods of inference, learning and solution-finding) in an algorithmic approach, selects an AI algorithm to solve a specific practical technical task, implements an AI algorithm in a selected programming language (Matlab or C++) to solve problems of decision-making processes, such as e.g. forecasting, planning, diagnostics, control, optimization.			[SW1] Assessment of factual knowledge		
	K7_U08	The student learns the basic principles of conducting work and research in an industrial environment, application of occupational safety and health.			[SU1] Assessment of task fulfilment		

Subject contents	<p>LECTURE Basic definitions of intelligence, artificial intelligences, scope of research on artificial intelligence. Tasks of artificial intelligence formal and approximate inference, information-based learning, solution space search, - overview of intelligent computing techniques. Examples of tasks solved by artificial intelligence methods. Formal inference, task formulation, syntax and semantics of the language of logic, construction of an automatic inference system. Approximate inference, fuzzy logic - representation and processing of qualitative knowledge, fuzzy sets, operations on sets, fuzzy inference, fuzzy regulator, fuzzy rule bases on numerical data. Design of fuzzy autopilot for ship heading control. Neural networks, multilayer perceptron learning, reinforcement learning - task formulation, value function, reinforcement learning as a value function approximation method 4. Solution space search methods, evaluation function, heuristic evaluation methods. Random methods - climbing and random straying algorithm, simulated annealing algorithm. 5. solution space search with genetic algorithm (AG). Scheme and operation of AG, population representation, initial population, adaptation function, genetic operators, algorithm parameters. Theoretical basis of AG. Computer implementation of classical AG. Genetic techniques. Representation and structure of populations. AG solving optimization problems. Multicriteria optimization problem in AG. Example evolutionary route planning of an autonomous robot in an environment, trajectory determination of a ship in a collision situation at sea. Hybrid methods - techniques of combining fuzzy-neural systems (fuzzy neural networks), use of genetic algorithms for parameter tuning of fuzzy and neural models.</p> <p>LABORATORY EXERCISES Fuzzy controller - evaluation of control system properties, resistance to disturbances. Synthesis of fuzzy controller - techniques of creating P, PI, PID fuzzy controller. Neural network learning test with teacher. Modeling of continuous industrial process using SN. Study of properties of genetic algorithm depending on selection method, coding method and operators used. Solving an optimization task with constraints using evolutionary method. Optimization of a robot's path in an environment using evolutionary method.</p> <p>PROJECT Design of a selected control system using artificial intelligence.</p>														
Prerequisites and co-requisites	Knowledge from the course Fundamentals of Automatics														
Assessment methods and criteria	<table border="1" data-bbox="450 907 1489 1039"> <thead> <tr> <th data-bbox="450 907 794 936">Subject passing criteria</th> <th data-bbox="794 907 1139 936">Passing threshold</th> <th data-bbox="1139 907 1489 936">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="450 936 794 965">Report on the exercises</td> <td data-bbox="794 936 1139 965">100.0%</td> <td data-bbox="1139 936 1489 965">30.0%</td> </tr> <tr> <td data-bbox="450 965 794 994">Project documentation</td> <td data-bbox="794 965 1139 994">100.0%</td> <td data-bbox="1139 965 1489 994">20.0%</td> </tr> <tr> <td data-bbox="450 994 794 1039">Colloquium</td> <td data-bbox="794 994 1139 1039">50.0%</td> <td data-bbox="1139 994 1489 1039">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Report on the exercises	100.0%	30.0%	Project documentation	100.0%	20.0%	Colloquium	50.0%	50.0%
