

Subject card

Subject name and code	Microbiological aspects of ecosystems , PG_00057768							
Field of study	Green Technologies							
Date of commencement of studies	October 2022		Academic year of realisation of subject			2022/2023		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies	Mode of delivery			at the university			
Year of study	1		Language of instruction			Polish		
Semester of study	2		ECTS credits		4.0			
Learning profile	general academic profile		Assessment form		assessment			
Conducting unit								
Name and surname	Subject supervisor							
of lecturer (lecturers)	Teachers							
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0		60
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	60		5.0		35.0		100
Subject objectives	The course offers fundamentals of the following topics with an emphasis on the aspects relevant to environmental science and engineering applications: chemistry of life; fundamentals of microbial metabolism; anabolism; catabolic diversity; ecological concepts and natural microbial ecosystems; engineered microbial ecosystems and microbiological aspects of drinking water purification and wastewater treatment; microbial bioremediation; biotechnology and industrial applications.

IRG_UDQ1 js able to operate in price and experiment and perform typical analysis of studies of carry out an analysis of spisal conservation of spine devices according to specification. Irange devic	Learning outcomes	Course outcome	Subject outcome	Method of verification		
role of a technical college graduate, take the reflections on the ethical, scientific and social understands the needs to promote public with information and opinions concerning the activities of the profession of regiment. REG_WO4] is aware of the importance of environmental production of regiment. REG_WO4] is aware of the importance of environmental knowledge of chemical and biological threats to the environmental knowledge of chemical and biological threats to the environment, with particular emphasis on antirropogenic factors, has a basic knowledge of susstainable development as well as national and European environmental management conditions. REG_WO4] capable of formulating and solving design tasks in the field of environmental technology aspects, including environmental, an anagement conditions. REG_WO4] capable of formulating and solving design tasks in the field of environmental technology aspects, including environmental, electrongy, applies the principles of occupational health and safety, is able to make initial assessment of exploring the principles of occupational health and safety, is able to make initial assessment of environmental productions and actions. REG_WO3] has a basic knowledge of servinonmental control of environmental productions and actions. REG_WO3] has a basic knowledge of control of environmental productions and extensive the propriets of exploring the principles of occupational health and safety, is able to make initial assessment of environmental pollution and schools of environmentally friendly technologies and technologies which do not produce waste, knows technology of cleaning and an advised water management, has a basic understanding of the theoretical basis of methods and hypes of apparatus used in chemical analysis of methods and safety and the		equipment and perform typical analyzes of studies of environmental pollution, is able to carry out an analysis of typical environmental pollution and simple devices according to	apparatus and perform analysis on environmental pollution	use methods and tools [SK4] Assessment of communication skills, including		
importance of environmental protection, has howledge in protection and has a basic knowledge of chemical and biological threats to the environment, with particular factors, has a basic knowledge of knowledge of the principles of sustainable development as well as national and European environmental management conditions. [R6_U04] capable of formulating and solving design tasks in the field of environmental technology to recognize their non-technical economic and legal is capable of occupational health and safety. Is able to make initial assessment of engineering solutions and actions. [R6_U04] with the principles of occupational health and safety is able to make initial assessment of engineering solutions and actions. [R6_W03] has a basic knowledge of environmental recognize their non-technical experiments of the principles of occupational health and safety is able to make initial assessment of engineering solutions and actions. [R6_W03] has a basic knowledge of environmental protection from pollution, the protection from pollution, t		role of a technical college graduate, take the reflections on the ethical, scientific and social aspects of the work performed, understands the need to promote, formulating and providing the public with information and opinions concerning the activities	responsibility and the impact of engineering work on the			
and solving design tasks in the field of environmental technology, applies the principle of environmental aspects, including environmental, economic and legal. Is capable of applying the principles of occupational health and safety. Is able to make initial assessment of engineering solutions and actions IK6. W03) has a basic knowledge of soil, air and water pollutants, design and supervision of environmentally friendly technologies and technologies which do not produce waste, knows technology of cleaning and neutralization of industrial waste and wastewater management, has a basic understanding of the theoretical basis of methods and types of apparatus used in chemical analysis of environmental pollutants Subject contents Transfer of fundamental knowledge on: 1.microbial metabolism and its components, 2.major microbial catabolic pathways, 3.water and wastewater microbiology, role of microorganisms in treatment processes, and transfer of applied knowledge for: 4.direct hands on (students) run of experimental measurement/analysis of microbiological parameters significant for environmental science and engineering applications Prerequisites and co-requisites Assessment methods and criteria Basic literature Basic literature 1. Microbial Ecology: Fundamentals and applications, 4 edycja, Ron. M. Atlas, Richard Bartha 2. Environmental Biology 3 edycja Ian L. Pepper, Charles P. Gerba, Terry J. Gentry		importance of environmental protection and has a basic knowledge of chemical and biological threats to the environment, with particular emphasis on anthropogenic factors, has a basic knowledge of knowledge of the principles of sustainable development as well as national and European environmental management	environmental protection, has knowledge of chemical and biological threats to the environment, with particular emphasis on anthropogenic			
of soil, air and water pollutants, design and supervision of environmentally friendly technologies and technologies which do not produce waste, knows technology of cleaning and neutralization of industrial waste and wastewater management, has a basic understanding of the theoretical basis of methods and types of apparatus used in the manalysis of environmental pollution wastewater management, has a basic understanding of the theoretical basis of methods and types of apparatus used in chemical analysis of environmental pollutants Subject contents Transfer of fundamental knowledge on: 1. microbial metabolism and its components, 2.major microbial catabolic pathways, 3. water and wastewater microbiology, role of microorganisms in treatment processes, and transfer of applied knowledge for; 4. direct hands on (students) run of experimental measurement/analysis of microbiological parameters significant for environmental science and engineering applications Prerequisites and co-requisites Assessment methods and criteria Subject passing criteria Passing threshold Percentage of the final grade laboratory exercises 60.0% 50.0% Eest 60.0% 50.0% 1.
