Subject objectives

The aim of the course is to acquaint the Student with the advanced 2D NMR techniques, mass spectrometry techniques, UV-VIS experiments and the basic IR techniques. As a result of the course, Students will have full knowledge of the concepts of the spectroscopic techniques listed above, as well as they will be able to solve advanced structural problems considering biologically active compounds.

Example issues/ example questions/ tasks being completed

- Basing on the given set of COSY, HSQC, HMBC and NOESY experiments try to decide, which of the proposed structures of the given compound is the correct one.
- Basing on the MS spectrum of O-metylated poliol derivative, localize the hydroxyl groups.
- Basing on the set of UV-VIS spectra, establish the purity of a given compound and determine a number of spectral forms present in a solution.
