

Subject card

Subject name and code	Chemical and Biotechnological Apparatus, PG_00054694						
Field of study	Biotechnology						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2022/2023		
Education level	second-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Energy Conversion and Storage -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Monika Wilamowska-Zawłocka				
	Teachers		dr hab. inż. Monika Wilamowska-Zawłocka				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		10.0		45.0	100
Subject objectives	Student learns about the classification of industrial processes (mechanical, thermal and diffusion) and construction and operation of devices for their implementation. The equations describing fluid dynamics will be discussed. The construction and function of apparatus i.e. pumps, pipelines, tanks, reactors and bioreactors, conveyors, grinding machines, apparatus for separation and mixing processes, heat exchangers, drying, distillation, rectification and mass transfer devices will be presented. The devices will be discussed in terms of their usefulness in the biotechnological industry.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W10] has knowledge in the field of bioprocess technology and engineering and knowledge in the field of engineering design of technical objects and processes including engineering graphics with the use of computer-aided design and databases		The student knows the construction and operation of basic equipment used in chemical and biotechnological technology. He is able to select on the basis of calculations the appropriate equipment for industrial installation. The student uses standards and catalogs of apparatus provided by manufacturers in the design of installations.		[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects		
[K7_U10] is able to use knowledge about possibilities, aims and limitations of biotechnology to develop, design and obtain products and biotechnological processes in the area of his/her specialization		The student has knowledge of biotechnological processes and industrial installations used in the biotechnology industry.		[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject			
Subject contents	The content of the classes includes the presentation of necessary information relating to construction and operational principles of conventional machines and apparatuses generally applied in the chemical and biotechnological industries. The lecture covers discussion of the relations between the theory of devices operation and their construction supplemented with drawings. The intention is to give sufficient theoretical matter to provide the student with a satisfactory understanding of the subjects discussed.						
Prerequisites and co-requisites	Knowledge of chemical engineering, basic mathematics, basic physical chemistry, knowledge of selected physical quantities						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Project		60.0%		40.0%		
	Lectures		60.0%		60.0%
