

Subject card

| Subject name and code | Chemical and Biotechnological Apparatus, PG_00054694 | | | | | | | | |
|---|---|---|--|-------------------------------------|--|--|---------|---------------------------|--|
| Field of study | Biotechnology | | | | | | | | |
| Date of commencement of studies | October 2022 | | Academic year of realisation of subject | | | 2022/2023 | | | |
| Education level | second-cycle studies | | Subject group | | | Obligatory subject group in the field of study | | | |
| Mode of study | Full-time studies | | Mode of delivery | | | at the university | | | |
| Year of study | 1 | | Language of | of instruction | 1 | Polish | | | |
| Semester of study | 1 | | ECTS credits | | | 4.0 | | | |
| Learning profile | general academic profile | | Assessment form | | | exam | | | |
| Conducting unit | Department of Energy Conversion and Storage -> Faculty of Chemistry | | | | | | | | |
| Name and surname | Subject supervisor | | dr hab. inż. Monika Wilamowska-Zawłocka | | | | | | |
| of lecturer (lecturers) | Teachers | dr hab. inż. Monika Wilamowska-Zawłocka | | | | | | | |
| Lesson types and methods | Lesson type | Lecture | Tutorial | Laboratory | Laboratory Project | | Seminar | SUM | |
| of instruction | Number of study hours | 30.0 | 0.0 | 0.0 | 15.0 | | 0.0 | 45 | |
| | E-learning hours inclu | ided: 0.0 | | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in classes include plan | | Participation in consultation hours | | Self-study | | SUM | |
| | Number of study hours | 45 | 10.0 | | | 45.0 | | 100 | |
| Subject objectives | Student learns about the classification of industrial processes (mechanical, thermal and diffusion) and construction and operation of devices for their implementation. The equations describing fluid dynamics will be discussed. The construction and function of apparatus i.e. pumps, pipelines, tanks, reactors and bioreactors, conveyors, grinding machines, apparatus for separation and mixing processes, heat exchangers, drying, distillation, rectification and mass transfer devices will be presented. The devices will be discussed in terms of their usefulness in the biotechnological industry. | | | | | | | ynamics will and at | |
| Learning outcomes | Course out | Course outcome Subject | | | | ect outcome Method of verification | | | |
| | [K7_W10] has knowl field of bioprocess te engineering and knowledge field of engineering of technical objects and including engineering with the use of compidesign and database | The student knows the construction and operation of basic equipment used in chemical and biotechnological technology. He is able to select on the basis of calculations the appropriate equipment for industrial installation. The student uses standards and catalogs of apparatus provided by manufacturers in the design of installations. | | | [SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects | | | | |
| | [K7_U10] is able to use knowledge about possibilities, aims and limitations of biotechnology to develop, design and obtain products and biotechnological processes in the area of his/her specialization | | The student has knowledge of biotechnological processes and industrial installations used in the biotechnology industry. | | [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject | | | | |
| Subject contents | The content of the classes includes the presentation of necessary information relating to construction and operational principles of conventional machines and apparatuses generally applied in the chemical and biotechnological industries. The lecture covers discussion of the relations between the theory of devices operation and their construction supplemented with drawings. The intention is to give sufficient theoretical matter to provide the student with a satisfactory understanding of the subjects discussed. | | | | | | | | |
| Prerequisites and co-requisites | Knowledge of chemical engineering, basic mathematics, basic physical chemistry, knowledge of selected physical quantities | | | | | | | | |
| Assessment methods and criteria | Subject passin | Passing threshold | | | Percentage of the final grade | | | | |
| | Project | | 60.0% | | | 40.0% | | | |
| | Lectures | | 60.0% | | | 60.0% | | | |

| - Fluid dynamics - equations describing fluid dynamics, flow resistance in pipelines. - example questions/ tasks being completed - Pipelines and pipeline armature for chemical processes - Pumps - standard and special pumps, their construction and application, pump sealing - Compressors and fans - Transport of materials - conveyors - Storage tanks - materials and components of containers depending on the type of substance stored - Mixing processes in the chemical industry, construction of mixers, types of mixers, mixing efficiency and methods of victice elementation - Reactors and bioreactors - Shredding processes - construction of equipment and energy consumption of operations depending on the required degree of fragmentation - Separation of heterogeneous systems - Heat exchange - heat transfer coefficients, heat exchangers, evaporators, crystallizors, dryers. - Mass exchange - adsorption and absorption columns - Distillation and rectification processes Sample questions: List and describe the differences between displacement and centrifugal pumps. Why are the pumps connected in series / parallel? How can the capacity of a centrifugal / pixton pump be adjusted? Which pumps are suitable for transferring finely structured liquids and slurries (without damaging the liquid structure)? List an pipeline deaning methods. How to reduce / eliminate circular motion in mixers? List the types of bioreactors. Specify the device (s) best suited for separating a three phase liquid-liquid-solid system. Why are evaporators often combined in series? Why are evaporators often combined in series? Work placement Not applicable | | | | | | |
