

Subject card

Subject name and code	Physics - Laboratory, PG_00038087						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2022/2023		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Control Systems Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Mirosław Mizan, doc. PG					
	Teachers	dr inż. Daniel Kowalak dr inż. Leszek Litzbarski dr inż. Mirosław Mizan, doc. PG					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	15.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	15	2.0		33.0		50
Subject objectives	Familiarizing students with basic physical phenomena, with particular emphasis on phenomena occurring in electrical, electronic and electrical devices.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W02] has basic knowledge of physics including electrostatics, electromagnetism, electrodynamics, wave motion, acoustics, mechanics, thermodynamics, optics, solid state physics; including knowledge necessary to understand the basic physical phenomena occurring in devices of systems and systems of automation and robotics	Knowledge of basic phenomena and principles concerning rigid body motion kinematics and geometric and wave optics. Understanding the transformer's operating principle. Knowledge of basic principles describing electrical circuits in steady and transient states.			[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	[K6_U02] can work individually and in a team, can communicate using various techniques in a professional environment, as well as document and analyze the results of their work, can estimate the time needed to perform the entrusted task can prepare and present a presentation on the problems and results of an engineering task	Ability to perform a connection of basic electrical circuits, perform measurements of electrical quantities and interpretation of waveforms of these quantities. The ability to practical use of an electric transformer. The ability to determine the basic quantities characterizing the motion of a solid body and the quantities describing propagation of light.			[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		
Subject contents	Basic principles of kinematics and dynamics of rigid body motion - uniformly accelerated motion and harmonic motion, moment of inertia, principle of energy conservation, determination of terrestrial acceleration. Fundamentals of geometric and wave optics - light propagation, refraction, dispersion, diffraction, polarization, measurements of light intensity. The phenomenon of electromagnetic induction - testing of a transformer with a ferromagnetic core. Ohm's law and Kirchhoff's law in linear and non-linear DC circuits. Relations between voltage and electric current in sinusoidal circuits with linear RLC elements. Transient states in electrical circuits.						
Prerequisites and co-requisites							

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	reports on laboratory exercises	50.0%	48.0%
	ongoing control of the theoretical preparation for the laboratory exercises	50.0%	16.0%
	written final test	50.0%	36.0%

	eResources addresses	Adresy na platformie eNauczanie: Laboratorium fizyki [2022/23] - Moodle ID: 27872 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=27872	
Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. Determine gravity of Earth g with the aid of simple pendulum (mathematics). 2. Explain measurement of the focal length of a convex lens using Bessel's method. 3. Explain the principle of operation and the method of determining the transformer parameters. 4. Characterize transient states in serial circuits RL, RC, RLC. 5. Sketch the currents and voltages waveforms in the exemplary linear AC circuit.
