

Subject card

Subject name and code	Microprocessor Engineering, PG_00038098						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			5.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Control Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Andrzej Kopczyński					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	60	8.0	57.0	125		
Subject objectives	Understanding the basic concepts and issues concerning the operation of microcontrollers and microprocessor systems. Getting to know the methods and tools for programming microprocessors and their peripherals.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_K02] can work in a group taking on different roles in it				[SK1] Assessment of group work skills		
	[K6_U01] can obtain information from literature, databases and other sources; integrate the information obtained, interpret it and draw conclusions, formulate and justify opinions				[SU1] Assessment of task fulfilment		
	[K6_W05] has basic knowledge of the principles of operation of basic electronic, energy and power electronic components and systems				[SW3] Assessment of knowledge contained in written work and projects		
Subject contents	<p>LECTURE Microprocessor - the idea and history. Methods of data representation in microprocessor systems. Data encoding standards. Basic arithmetic and logical operations on binary data. Microprocessor system, the basic components and architecture. Internal structure and operating principle of a typical microprocessor. Programming in assembler and C language. Tools to build and run the software. Implementation of embedded software in the system. Microcontrollers from 8051 family: internal structure, modes of operation, the list of instructions. Characteristics of integrated peripheral components: ports, time-counters, interrupt controller, serial transmission system. Memory of microprocessor systems - types, characteristics, structure. Principles of cooperation between central processing unit, memory and I/O devices. Coupling of typical peripheral devices to the microprocessor. Methods of parallel and serial data transmission. Methods of measuring time and frequency. A/C and C/A converters. Microcontrollers of other families: AVR, PIC, ARM. Examples of the use of microcontrollers in automation systems.</p> <p>LABORATORY The aim of the laboratory is to acquire the practical skills of microcontroller programming and knowledge of tools used for this purpose. Laboratory classes consist of the preparation and testing of simple programs written in C and Assembler. The programs are tested on evaluation boards with microcontrollers from 8051 and STM32F1 family and typical elements of the input/output.</p>						
Prerequisites and co-requisites	<ol style="list-style-type: none"> 1. Basic knowledge of digital technology. 2. Ability to program in C language. 						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written exam	60.0%	50.0%
	Practical exercise	60.0%	50.0%

	eResources addresses		
Example issues/ example questions/ tasks being completed	Sample topics of laboratory exercises: 1. The use of the microcontroller input/output ports 2. Logic controller function implementation 3. 7-segment LED display driver implementation 4. The use of LCD alphanumeric display 5. The use of the microcontroller timers 6. Interrupts handling 7. Communication via UART interface		
Work placement	Not applicable
