

Subject card

Subject name and code	Physics - Laboratory, PG_00003417						
Field of study	Hydrogen Technologies and Electromobility						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2022/2023		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Adam Młyński					
	Teachers	dr inż. Adam Młyński					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		15.0	50
Subject objectives	Design of experiments selected physical phenomena, the measurement of selected physical quantities and the development of reports from research, along with a discussion of the results.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_K02] can work in a group taking on different roles in it						
	[K6_U02] can work individually and in a team, can communicate using various techniques in a professional environment, as well as document and analyze the results of their work, can estimate the time needed to perform the entrusted task						
	[K6_W02] has basic knowledge of physics and chemistry including electrostatics, electromagnetism, electrodynamics, wave motion, acoustics, mechanics, thermodynamics, optics, solid state physics; including knowledge necessary to understand the basic physical phenomena occurring in hydrogen devices, systems and installations as well as automation and robotics systems						
[K6_W03] knows the basic methods of analysis of DC and AC circuits, the basic laws of electrical engineering and the properties of elements of electrical circuits	Can use the knowledge from various modules to analyze and evaluate the results of observations and measurements in the laboratory.			[SW1] Assessment of factual knowledge			

Subject contents	LABORATORY EXERCISES. The purpose of laboratory exercises is familiarize students with experimental methods of selected physical phenomena. The students learn about basic measuring instruments used in physics. The students prepare preliminary calculations to determine the value of the measured physical quantities, then assemble the measurement system and perform the experiment. There are 12 laboratory exercises in the course. The students familiarize with measuring of material, kinetic, dynamic, acoustic and electric quantities parameters. There are new generation analogue and digital devices (such as digital oscilloscopes with memory, power supplies and digital signal generators) available in the laboratory. The students can prepare themselves in advanced to laboratory exercises by reading listed literatures and laboratory instructions.		
Prerequisites and co-requisites	Knowledge of the subject Physics , knowledge of electrical circuits course		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written reports of lab	100.0%	35.0%
	Tests of the subject of several laboratory exercises	60.0%	65.0%

	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	Realized issues: 1.The study of phenomena of geometrical optics and wave - propagation of light, refraction, dispersion, diffraction, polarization, measurement of light intensity. 2 The study of fundamental phenomena kinematics and dynamics motion of bodies - harmonic motion, moment of inertia, the principle of conservation of energy, determination of the acceleration of gravity. 3 The study of wave phenomena.4 Investigations of DC linear circuits.5 The test non-linear circuit.6 The test circuits with linear RLC elements.7 The study of resonance in electrical circuits.8 Investigation of transients in electrical circuits.9 Investigations active circuits. 10 Investigations of the iron-core transformers.11 Study of 3-phase electrical circuit.12 The test circuit magnetically coupled coils.Sample questions:Give the definition of Ohm's law and generally discuss the methods of solving DC circuits.Give the definition of Ohm's law and generally discuss the methods of solving AC circuits.Report the distribution of forces for the inclined plane.Describe the method of determining the acceleration due to gravity using the system with an inclined plane.What are the conditions for a standing wave?Describe the static and dynamic model of a nonlinear element at the duty point. What elements are included in this model, what is their geometric interpretation.Provide the equivalent diagram of a transformer with a ferromagnetic core. Describe the parameters of this diagram.		
Work placement	Not applicable
