

## Subject card

Subject name and code	Electrical engineering in transport, PG_00058350						
Field of study	Hydrogen Technologies and Electromobility						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Electrical Engineering of Transport -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Leszek Jarzębowicz					
	Teachers	dr hab. inż. Leszek Jarzębowicz					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	45	6.0		24.0		75
Subject objectives	Gaining knowledge about the issues of electric traction and electrified transportation systems. Acquiring the ability to solve basic tasks and problems related to electric traction infrastructure and vehicles.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U04] can apply the learned methods to the analysis and design of electrical elements, devices and systems	Student is able to calculate the principal operational parameters of electric vehicles and power supply infrastructure.			[SU1] Assessment of task fulfilment		
	[K6_W10] knows the basics of the processing, use and rational use of electricity, including the principles of electric traction in various transport systems	The student knows structure and features of traction power supply for various railway and urban systems.			[SW1] Assessment of factual knowledge		
Subject contents	Definitions. History of electric traction. Vehicle classification and specific parameters. Equation of motion. Vehicle movement resistance. Vehicles' electric drives. Tractive force characteristics. Electric vehicles. Electrified transportation systems. Motion phases. Shaping the speed profile. Motion dynamics. 3 kV-DC railway traction power supply system. Other railway traction power supply systems. Urban traction supply systems. Catenary. Traction substations. Section cabins. Traction supply control systems. Current collectors (pantographs). Diagnostics of current collectors. Electric vehicles' braking systems. Energy consumption. Energy storages.						
Prerequisites and co-requisites	Basic knowledge of physics and electrical machines, and the ability to solve simple electrical circuits.						
Assessment methods and criteria	Subject passing criteria	Passing threshold			Percentage of the final grade		
	Raports and preparation for laboratory	60.0%			30.0%		
	Lecture part tests	60.0%			70.0%

	eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed	Present the main parameters and features of various railway power supply systems used in Europe. Discuss what determines the dynamics of vehicle motion.	
Work placement	Not applicable
