

## Subject card

Subject name and code	Statistics , PG_00049165						
Field of study	Spatial Development						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2023/2024		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Economic Sciences -> Faculty of Management and Economics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Krzysztof Świetlik				
	Teachers		dr inż. Krzysztof Świetlik				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	30.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		7.0		48.0	100
Subject objectives	<p>To familiarise students with basic concepts in the field of statistics and methods of testing regularities occurring in mass processes.</p> <p>Shaping the practical skills of using statistical software to process statistical data and interpret the obtained results.</p> <p>Developing creativity in collecting statistical data from public internet sources for the needs of conducting innovative analyses.</p>						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U07] evaluates the usefulness of standard methods and tools used in planning and management of spatial development and is able to select and apply the most appropriate ones		The student has a basic knowledge of the spatial nature of socio-economic phenomena. The student knows and can choose the appropriate tools for the analysis of spatial phenomena.		[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject		
	K6_U04		The student can interpret the results of his/her statistical analyzes.				
	[K6_W03] has elementary knowledge in the field of mathematics and physics relating to issues related to space management, including the basic mathematical methods used in urban design, as well as analytical and design methods using information technology used in planning processes of settlement structures		The student can choose the description method depending on the data type, using both accounting calculations and statistical software.		[SW3] Assessment of knowledge contained in written work and projects		

Subject contents	<ul style="list-style-type: none"><li>• Variables type. Measurement scales.</li><li>• Grouping and presentation of statistical material</li><li>• Measures of central tendency and diversity</li><li>• Asymmetry and kurtosis measures</li><li>• Analysis of relationship between qualitative variables</li><li>• Analysis of relationship between quantitative variables</li><li>• Regression</li><li>• Dynamics analysis - index method</li><li>• Dynamics analysis - trend and seasonality models</li><li>• Spatial weight matrices</li><li>• Visualization of spatial data</li><li>• Spatial autocorrelation</li><li>• Spatial regression models</li></ul>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Tutorial exam	60.0%	34.0%
	Written exam	60.0%	33.0%
	Tutorial exam	60.0%	33.0%

	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	<p>Based on the prepared data set calculate and interpret measures of central tendency, diversity, asymmetry and kurtosis.</p> <p>Check whether there is a correlation between variable X and Y.</p> <p>Estimate the multiple regression model for the variable X. Interpret goodness-of-fit measures.</p> <p>Check if variable X is spatially autocorrelated. Justify your answer.</p>		
Work placement	Not applicable
