

## Subject card

Subject name and code	Electric Power Systems, PG_00053196						
Field of study	Electrical Engineering						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Electrical Power Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Robert Kowalak				
	Teachers		dr hab. inż. Robert Kowalak				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		3.0		27.0	75
Subject objectives	To acquaint students with the work of the power system.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_K01		The student knows that he must learn the principles of the power system		[SK1] Assessment of group work skills [SK5] Assessment of ability to solve problems that arise in practice		
	K6_U06		The student understands the structures of the PPS and the principles of its functioning		[SU2] Assessment of ability to analyse information		
	K6_W09		The student can demonstrate knowledge of the processes of generation, transmission and distribution of electricity in the power system		[SW1] Assessment of factual knowledge		
Subject contents	Generating active Power in the Power system. The sources of active power and their profiles. Turbine regulators. Generating and compensation of reactive Power in the Power system. The sources of reactive power and their profiles. Synchronous generators as a regulated source of reactive power. Induction systems of synchronous generators. Regulators of the generator. Capacitors and chokes as a static source of reactive power. Regulators of condensers baterries. The principles of reactive power compensation in transmission and distributive grids. Automatic regulation of tension and frequency in the power system. Frequency regulation in the power system. Primary and secondary regulation. ARCM grids. Frequency regulation of the Power system. Integrated control of ARNE and ARST.						
Prerequisites and co-requisites	Electrical Power Engineering						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Practical exercise		60.0%		40.0%		
	Midterm colloquium		60.0%		60.0%
