

Subject card

Subject name and code	ANALYTICAL CHEMISTRY, PG_00053081						
Field of study	Chemistry						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			8.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Analytical Chemistry -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Piotr Konieczka					
	Teachers						
Lesson type and method of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	45.0	0.0	60.0	0.0	15.0	120
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	120	10.0		70.0		200
Subject objectives	The role, place and task analysis, the analytical process, analytical signal; collection and preparation of samples for analysis; analytical methods (methods of primary and absolute, indirect methods); theoretical base and a description of the selected analytical methods (gravimetry, volumetric acid-base titration, precipitation titration, redox titration, complexometry; electroanalysis; spectroscopic techniques, chromatographic techniques and related analytical methods validation parameters-characterization;.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K6_W03	Has a basic knowledge of trends in the area of theoretical chemistry			[SW3] Assessment of knowledge contained in written work and projects		
	K6_U07	Can make accurate and precise measurement in the analytical laboratory			[SU1] Assessment of task fulfilment		
	[K6_K03] understands the importance of group and team activities in which members adopt various roles	Understand the importance of group's activities			[SK2] Assessment of progress of work		
Subject contents	Lecture: The role and the place and tasks chemical analytical process, signal analytical; the collection and preparation of samples for analysis; the analytical methods (primary methods and absolute, indirect method); bases theoretical selected and a description of the analytical methods (gravimetry, volumetry, titration, redoxometry, complexometry, electroanalytical techniques, spectroscopic techniques ; chromatographic techniques, characteristics of the analytical method- validation parameters. The Seminar: Presentation of analytical result, the uncertainty, significant figures; gravimetric analysis, volumetric techniques, titration curves calculation; bases statistics in chemical metrology. Laboratory: Health and safety rules, the correct weighing, handling of volumetric equipment; adjustment titre NaOH; determination of H2SO4 content by titration technique; determination of CH3COOH content; the determination of Cl- in the water-precipitation titration; the determination of iron-gravimetric analysis; the determination of Ca and Mg side by side-complexometry; the determination of Cu-redoxometric and electrogravimetric titration; adjustment titre of KMnO4; statistical treatment of analytical results; spectroscopic techniques; gas chromatography;						
Prerequisites and co-requisites	Student should have knowledge of the: stoichiometry, chemical reaction equilibrium, reactions and theory of acids and bases, precipitation reaction, solubility product, reaction mechanism, complex formation constant						
Assessment methods and criteria	Subject passing criteria	Passing threshold			Percentage of the final grade		
	exam	60.0%			55.0%		
	laboratory	60.0%			25.0%		
	seminary	60.0%			20.0%
