

。 GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	PRACTICE, PG_00049389									
Field of study	Chemistry in Construction Engineering									
Date of commencement of studies	October 2022		Academic year of realisation of subject			2024/2025				
Education level	first-cycle studies		Subject group			Optional subject group				
Mode of study	Full-time studies		Mode of delivery			at the university				
Year of study	3		Language of instruction			Polish				
Semester of study	6		ECTS credits			6.0				
Learning profile	general academic profile		Assessment form			assessment				
Conducting unit	Department of Polymers Technology -> Faculty of Chemistry									
Name and surname	Subject supervisor		dr inż. Monika Gensicka-Kowalewska							
of lecturer (lecturers)	Teachers									
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial Laboratory Project		Projec	t	Seminar	SUM		
	Number of study hours	0.0	0.0	0.0	0.0		0.0	0		
	E-learning hours included: 0.0									
	Address on the e-lear	https://enaucza	nie.pg.edu.pl/r	noodle/	course/view.php?id=14818					
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM		
	Number of study hours	0		5.0		155.0		160		
Subject objectives	Student describes the chemical basis of production in the plant. Student gains knowlegde on functioning of the production company Student works in groups.									
Learning outcomes	Course outcome		Subject outcome			Method of verification				
	K6_K03		The student is able to solve problems related to the implementation of the task, performs risk assessment and is able to assess the effects of the activities performed. He can present the effects of his work, convey information in a generally comprehensible way, communicate, self-evaluate and constructively criticize the work of other people.			[SK3] Assessment of ability to organize work [SK4] Assessment of communication skills, including language correctness [SK5] Assessment of ability to solve problems that arise in practice [SK1] Assessment of group work skills				
	K6_U10		The student acquires the skills of proper and rational selection of building materials in terms of functional, economic and ecological aspects.			[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools				
	K6_K01		Student is able to present the results of work done by himself and his colleagues, is able to solve problems, and in case of encountering difficulties, is able to ask for help from people with more experience			[SK4] Assessment of communication skills, including language correctness [SK2] Assessment of progress of work				
	K6_K06		The student is able to work effectively in a team, both as a leader and a person performing tasks			[SK1] Assessment of group work skills				

Subject contents	The aim of the general apprenticeship is to improve of technological and engineering skills obtained by students in the course of studies by comparison with technological processes and questions of engineering realized on an industrial scale, in a given institution. If possible, the general apprenticeship should familiarize students with the following problems: - getting familiar with the organization of work: - the determination of location conditions, - knowledge of applied technologies, the origin and preparation of materials, - basic apparatus, - getting familiar with the shift work, production conditions and necessary doccuments, - getting aquainted with organization of technological section, duties of the chief technologist, - solving problems according to the recommendations of the apprenticeship supervisor. Students spend at least four weeks in the institution related to the area of study (industrial plant, R & D laboratory). In addition, during the general apprenticeship students acquaint with organizational structure, its regulations as well as the structure of production in the chosen company. If this is possible, the apprenticeship should familiarize students with the following problems: - institutional work regulations, safety and hygiene procedurs as well as the protection of state secret and confidential information; - the organizational structure of quality management and environmental protection; - main stages of production as well as technological sections.						
Prerequisites and co-requisites	The basic knowledge of chemistry and chemistry of building materials.						
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade				
and criteria	Chart of apprenticeship	100.0%	10.0%				
	A certificate of completion	100.0%	50.0%				
	Written report on the apprenticeship	60.0%	40.0%				
Recommended reading	Basic literature The rules for the implementation of internships by students at chem department are available at: https://chem.pg.edu.pl/dziekanat-wch/c studentow/praktyki-i-staz The list of cathedral tutors of student internships is available at: http chem.pg.edu.pl/documents/614792/0d715aad-4b62-47cf-acce-a9005782525d OHS instructions, technology and other materials provided by the facility hosting the apprentice.						
	Supplementary literature	No requirements					
	eResources addresses	Adresy na platformie eNauczanie:					
Example issues/ example questions/ tasks being completed	1. Getting to know the workplace: - Location, - Organizational and production structure of the workplace Technologies used, raw materials used, origin of raw materials, preparation of raw materials, - apparatus, 2. Getting to know the work of a production shift in one of the departments: - Production conditions in the department, - Knowing the documentation. 3. Getting to know the organization of the technological department (chief technologist): - Responsibility of the chief technologist and technologists, - Technological issues, - Documentation. 4. Problem solving according to the recommendations of the in-house internship tutor. 5. Presentation of the task that the trainee will be able to perform independently during the internship. 6. Selected issues related to materials management, production control, health and safety rules, environmental management. 7. Getting to know the issues of automation, process control and work organization in the plant. 8. Familiarization with projects implemented by the company (in particular with projects financed from EU funds). 9. Getting to know the company's marketing activities.						
Work placement	Not applicable						

Document generated electronically. Does not require a seal or signature.
