

## Subject card

Subject name and code	Modern Analytical Techniques, PG_00048919						
Field of study	Chemistry in Construction Engineering						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2023/2024		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Analytical Chemistry -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Justyna Płotka-Wasyłka				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	15.0	60
	E-learning hours included: 0.0						
	Address on the e-learning platform: <a href="https://enauczanie.pg.edu.pl/moodle/course/view.php?id=3783">https://enauczanie.pg.edu.pl/moodle/course/view.php?id=3783</a>						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		35.0	100
Subject objectives	Acquaintance with modern analytical techniques in theory and practice that will enable analysis building materials, monitoring and analytics of environmental pollution originating from squares construction, emitted from building materials						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_U06		After completing the course, the student will have knowledge of issues related to analytical techniques, which can be used for analysis and pollution monitoring building materials and construction sites.		[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		
	K6_W03		After completing the course, the student will have knowledge of issues related to analytical techniques, which can be used for analysis and pollution monitoring building materials and construction sites.		[SW1] Assessment of factual knowledge		
	K6_W08		The student is able to analyze phenomena and provide methods for them analysis and monitoring, so much needed in terms of construction		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		

Subject contents	1. Spectroscopic techniques used to analyze building materials  2. Theoretical and practical basics in the use of chromatographic techniques. Analysis of building materials and processing of received data.  3. Chemical sensors, an electronic nose type used to analyze and monitor release pollution from building materials.  4. Micro-extraction techniques used to prepare samples for analysis. Building materials and their solid, liquid and gas impurities.		
Prerequisites and co-requisites	Basic knowledge of chemistry.Knowledge of the dangers arising from emissions of building materials.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	lecture	60.0%	45.0%
	seminas	60.0%	10.0%
	lab	60.0%	45.0%
