

Subject card

Subject name and code	Modelling and Simulation Languages , PG_00047822						
Field of study	Biomedical Engineering						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Microelectronic Systems -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Bogdan Pankiewicz				
	Teachers		dr hab. inż. Bogdan Pankiewicz				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		60.0	125
Subject objectives	The aim of the subject is learning of modeling and simulation of electronic circuits using PSPICE and HDL languages such as Verilog and VHDL.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W04] Knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices		Student knows the syntax of PSPICE files, types of possible simulations, ways of describing analog and digital circuits, and how to perform simulations of electronic circuits. Student knows HDL languages: Verilog and VHDL. Student is able to perform a description of the digital system and its simulation.		[SW1] Assessment of factual knowledge		
	[K6_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study		Student can perform simulation using the PSPICE simulator. Student is able to design simple digital systems using Verilog and VHDL. The student is able to implement simple digital systems using FPGAs.		[SU1] Assessment of task fulfilment		
Subject contents	1. Introduction to and applications of HDL languages. Genesis of Verilog language. 2. Abstraction levels (Verilog). 3. Design methodologies. Simple example. 4. Syntax of Verilog. 5. Data types. 6. System tasks and compilers directives. 7. Modules and ports. 8. Modelling at gate level. 9. Delays in gates. 10. Modelling at register level. 11. Concurrent assignment. 12. Expressions and operators. 13. Modeling at behavioral level. 14. Functions and tasks. 15. Modelling techniques. 16. Verilog 2001 changes in the standard. 17. Genesis of VHDL language. 18. Syntax and data types. 19. Entities and their architectures. 20. Instantiation of components. 21. Concurrent assignments, simple and conditional. 22. Delays, concurrent and time operations. 23. Processes. 24. Conditional commands and loops. 25. Delays with wait keyword. 26. Functions and procedures. 27. Libraries and packages. 28. IEEE library. 29. Synthesis of state machines. 30. Testing the design. 31. Other HDL languages.						

Prerequisites and co-requisites	No requirements		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Practical exercise	50.0%	50.0%
	Exam	50.0%	50.0%
Recommended reading	Basic literature	K.Skahill, Vhdl for Programmable Logic, Addison-Wesley Publishing Company, 1996. S.Palnitkar, Verilog HDL, SunSoft Press, 1996. M. Zwoliński, Projektowanie układów cyfrowych z wykorzystaniem języka VHDL, W.KiŁ, 2002.	
	Supplementary literature	No requirements
