| Subject objectives | The aim of subject is lern and understand basic manufacturing techniques, especially with the dominant technique in the world's manufacturing processes, i.e. machining. Understanding the phenomenon of chip formation and the parameters of cutting processes for various types of chip machining. The student will also become lern with the construction and application of cutting tools and the types of materials used to manufacture these tools. | | | | | | | | |
| Learning outcomes | Course outcome | | Subject outcome | | | Method of verification | | | |
| | [K6_W05] has structured knowledge in the field of electrical engineering and electronics, necessary to understand the basics of operation and selection of electrical machines, electricity transmission systems and power electronic devices | | The student is able to determine whether a given main drive unit is sufficient to carry out selected machining processes. The student knows the ways of controlling movements and positions of cutting tools (mechanical and electronic) applied on conventional and numerical machine tools. | | | [SW1] Assessment of factual knowledge | | | |
| | [K6_U02] is able to a learned mathematica the analysis and des elements, systems a systems | The student will be able to estimate the energy requirements of a cutting process taking into account different machining methods, cutting tool geometries or different workpiece and tool materials. | | | [SU3] Assessment of ability to use knowledge gained from the subject | | | | |

Data wygenerowania: 09.02.2025 19:16 Strona 1 z 2

| Subject contents | LECTURE: Geometric and kinematic parameters of machining. Movements of the tool and the workpiece. Geometry of the blades in the tool arrangement and work arrangement, geometry of the cutting layer. Thephenomenon of chip formation and types of chips. Heat and temperature in the cutting zone. Cooling andlubricating agents. Wear of cutting tools. Strength and cutting power. Vibrations in the cutting process. Toolmaterials and rules for their selection. The basic methods of machining: cutting, turning, boring, milling, planing, machining of gears e.t.c. Abrasive machining.LABORATORY: Sawing materials and sawing machines. Machining on lathes. Machining on drills. Machining on milling machines. Machining on planers and slotting machines. Machining of gears. Machining on grinders. | | | | | | |
