

Subject card

Subject name and code	Design of energy systems, PG_00055903						
Field of study	Power Engineering, Power Engineering, Power Engineering						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Zakład Ogrzewnictwa, Wentylacji, Klimatyzacji i Chłodnictwa -> Institute of Energy -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Waldemar Targański					
	Teachers	dr inż. Waldemar Targański					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	0.0	30.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		18.0	50
Subject objectives	Familiarization with systems operating in the power industry and development of the ability to develop assumptions necessary for the design or modernization of these systems. Familiarization with the methods of designing power systems and developing the ability to solve engineering problems in the selection of their structure and equipment.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W07] knows the basics of economic calculus in the energy sector; knows the legal, organizational and economic principles of the functioning of energy markets, knows the basic principles of management and running a business	The student knows the basics of economic calculus in the design of energy systems; knows the legal, organizational and economic principles of their operation and conducting business activity.	[SW3] Assessment of knowledge contained in written work and projects
	[K6_W02] has a basic knowledge of physics (including optics, electricity and magnetism), chemistry, technical thermodynamics, fluid mechanics and general mechanics needed to understand and describe the basic phenomena occurring in devices and systems, energy plants and transmission networks and their environment	The student has basic knowledge of physics and chemistry, necessary to understand and describe the basic phenomena occurring in energy systems and their surroundings.	[SW3] Assessment of knowledge contained in written work and projects
	[K6_W09] knows the dangers of electrical devices and the principles of protection against them, has basic knowledge of heat exchangers, has basic knowledge of power equipment such as pumps, compressors, turbines, combustion engines, boilers, pipelines and their accessories and methods of their selection depending on the needs	The student knows the hazards coming from power equipment and the principles of protection against them, has basic knowledge of power equipment and their equipment as well as methods of their selection.	[SW3] Assessment of knowledge contained in written work and projects
	[K6_U07] is able to use basic knowledge of fluid flow machines and methods related to their design in an analytical and numerical approach to the preliminary design of an energy installation	The student is able to make a conceptual design of an energy installation.	[SU1] Assessment of task fulfilment
	[K6_W14] has a theoretical knowledge in the field of chemistry, biology, physics and mathematics including knowledge necessary to understand the technological processes related to water treatment, wastewater treatment, waste management in energy facilities, circular economy	The student has a structured and theoretically based knowledge necessary to understand technological processes related to energy systems.	[SW3] Assessment of knowledge contained in written work and projects
Subject contents	<p>Types of systems working in the power industry. The specificity of heating, cooling, air conditioning and electrical systems.</p> <p>Principles for developing assumptions necessary for the design or modernization of energy systems. The principles of developing an energy balance for various facilities.</p> <p>Methods of designing power systems. Rules for conducting appropriate calculations.</p> <p>Ways of solving engineering problems in the selection of structure and equipment of power systems.</p>		
Prerequisites and co-requisites	Physics, thermodynamics, electrical engineering		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	60.0%	100.0%
Recommended reading	Basic literature	Energy Systems and Sustainability. Oxford University Press. 2021.	
	Supplementary literature	Papers in journals.	
	eResources addresses	Adresy na platformie eNauczenie:	

Example issues/ example questions/ tasks being completed	Energy balance of the cold store. Energy balance of the heated building. Configuration of an air conditioning system. Configuration of a CHP plant system.
Work placement	Not applicable
