

## Subject card

Subject name and code	HVAC Installations, PG_00055899						
Field of study	Power Engineering, Power Engineering, Power Engineering						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Zakład Ogrzewnictwa, Wentylacji, Klimatyzacji i Chłodnictwa -> Institute of Energy -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Marcin Jewartowski					
	Teachers	dr inż. Marcin Jewartowski dr inż. Waldemar Targański dr inż. Maciej Wierzbowski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	15.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	60	4.0		36.0	100	
Subject objectives	Students acquire basic knowledge in the field of heating, refrigeration, ventilation and air conditioning systems in theoretical and practical aspects.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U06] is able to use the basic knowledge on the operation of energy equipment in the field of thermal power plants, thermal and energy and heating systems, combustion engines, compressors and rotating machines to assess the technical condition of the system		The student is able to measure and calculate the elements of heating, refrigeration, ventilation and air conditioning systems and to analyze the results.		[SU5] Assessment of ability to present the results of task		
	[K6_U08] can design the basic parameters of the selected technology related to energy conversion and select auxiliary devices and evaluate the project in terms of technical and economic		Student is able to calculate the thermal load of buildings and design simple heating installations with the use of auxiliary software.		[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools		
	[K6_W06] knows classic and developmental energy technologies, rules for the selection and operation of heat and energy devices and installations, basic principles of energy systems operation, basic issues regarding the reliability of energy devices and diagnostics, environmental effects of energy technologies used, methods of using renewable energy sources		The student is able to characterize heating, refrigeration, ventilation and air conditioning systems, their components and functioning.		[SW1] Assessment of factual knowledge		

Subject contents	<p>LECTURE: Basic concepts and regulations regarding heating. Heat sources in heating. Designed heat load of buildings. Central heating systems. Guidelines for design and calculations of central heating systems. Pressure losses in the pipes. Hydraulic control. Heating pipes and their thermal insulation. Radiators. Hot tap water systems. Passive buildings. Application of refrigeration units and heat pumps. Design and working principles of a compressor refrigeration plant. Direct and indirect cooling systems. Refrigerants and heat carriers: selected properties. Interaction of basic elements in cooling systems. Selected operational problems in refrigeration. Ventilation systems in buildings. Ventilation systems of industrial spaces. Methods of calculating supply and exhaust streams. Designing ducts. Equipment selection. The aim and application of air conditioning. Comfort and industrial air conditioning. Moist air - characteristics, Mollier chart. Calculation of the thermal load of objects - heat gains and losses. The necessary amount of supply air (including fresh air). Examples of air conditioning systems solutions. Recovery systems demands in air conditioning systems.</p> <p>LABRATORY: Influence of changes in the operating parameters of a cooling device on its characteristics. The influence of the system configuration on the work efficiency. Operation of various elements of refrigeration automation. Determination of comfort/discomfort indicators in the occupied zone. Determination of heat recovery efficiency of a ventilation and air-conditioning device Determination of air volumetric flow in HVAC installation. Determination of humidification process curve.</p> <p>PROJECT: Design of central heating installation for a selected building</p>														
Prerequisites and co-requisites	Knowledge from the course of Thermodynamics														
Assessment methods and criteria	<table border="1" data-bbox="448 734 1490 875"> <thead> <tr> <th data-bbox="448 734 794 768">Subject passing criteria</th> <th data-bbox="794 734 1141 768">Passing threshold</th> <th data-bbox="1141 734 1490 768">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 768 794 801">Laboratory</td> <td data-bbox="794 768 1141 801">56.0%</td> <td data-bbox="1141 768 1490 801">20.0%</td> </tr> <tr> <td data-bbox="448 801 794 835">Lecture</td> <td data-bbox="794 801 1141 835">56.0%</td> <td data-bbox="1141 801 1490 835">60.0%</td> </tr> <tr> <td data-bbox="448 835 794 875">Project</td> <td data-bbox="794 835 1141 875">56.0%</td> <td data-bbox="1141 835 1490 875">20.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Laboratory	56.0%	20.0%	Lecture	56.0%	60.0%	Project	56.0%	20.0%

	Supplementary literature	standards and regulations for calculating the design heat load and energy performance of buildings													
	eResources addresses	Adresy na platformie eNauczanie:													
Example issues/ example questions/ tasks being completed	The classification of central heating systems. Pressure losses in pipes. Thermodynamic processes in Linde cycle. Influence of changes in parameters of Linde cycle on its characteristics. List the methods for determining the amount of ventilation air.														
Work placement	Not applicable
