

Subject card

Subject name and code	Diagnostics and operation of energy devices , PG_00055915								
Field of study	Power Engineering, Power Engineering, Power Engineering								
Date of commencement of studies	October 2022	Academic year of realisation of subject		2025/2026					
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study				
Mode of study	Full-time studies		Mode of delivery		at the university				
Year of study	4		Language of instruction		Polish no applied				
Semester of study	7		ECTS credits		1.0				
Learning profile	general academic profile		Assessment form		assessment				
Conducting unit	Institute of Energy -> Faculty of Mechanical Engineering and Ship Technology								
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Jerzy Głuch						
	Teachers								
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM		
	Number of study hours	15.0	0.0	0.0	0.0	0.0	15		
E-learning hours included: 0.0									
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM		
	Number of study hours	15		1.0		9.0	25		
Subject objectives	Familiarizing students with methods of diagnosing the technical condition of power equipment								

Learning outcomes	Course outcome	Subject outcome	Method of verification	
	[K6_K04] is able to formulate opinions on technical and technological processes in energy and sanitary engineering	The student is able to identify thermal power plants and their operating models	[SK5] Assessment of ability to solve problems that arise in practice [SK2] Assessment of progress of work	
	[K6_W12] has basic knowledge of the life cycle and repairs of energy equipment in the field of thermal power stations, thermal and energy systems and heating systems, internal combustion engines and compressors as well as rotating machines	The student is able to indicate the methods of planning the repair on the basis of monitoring the operation of the equipment	[SW1] Assessment of factual knowledge	
	[K6_W13] has basic knowledge of the operation of energy equipment in the field of thermal power plants, thermal and energy and heating systems, internal combustion engines, compressors and rotating machines, has basic knowledge of the regulation of energy equipment and methods of their selection depending on the needs	The student is able to determine the indicators of correct operation of the device for various loads	[SW1] Assessment of factual knowledge	
	[K6_W06] knows classic and developmental energy technologies, rules for the selection and operation of heat and energy devices and installations, basic principles of energy systems operation, basic issues regarding the reliability of energy devices and diagnostics, environmental effects of energy technologies used, methods of using renewable energy sources	The student is able to find methods for assessing the efficiency of the operation of power equipment	[SW3] Assessment of knowledge contained in written work and projects	
Subject contents	Introduction, thermodynamic and mechanical measurements in industry, industrial measuring devices, distributed control systems DCS, methods of technical diagnostics, methods of process diagnostics			
Prerequisites and co-requisites	Basic knowledge of thermal power plants, thermodynamics, fluid mechanics, automatic control methods			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade	
	written test	60.0%	100.0%
