

Subject card

Subject name and code	Mathematics 1, PG_00041990								
Field of study	Power Engineering, Power Engineering								
Date of commencement of	October 2022		Academic year of		2022/2023				
studies			realisation of subject						
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study				
Mode of study	Full-time studies		Mode of de	livery		at the university			
Year of study	1		Language	Language of instruction		English			
Semester of study	1	1		ECTS credits		6.0			
Learning profile	general academic pro	ofile	Assessmer	Assessment form		exam			
Conducting unit	Mathematics Center	-> Vice-Rector	for Education						
Name and surname	Subject supervisor		dr Marcin Szy	dr Marcin Szyszkowski					
of lecturer (lecturers)	Teachers		dr Marcin Szyszkowski						
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	:t	Seminar	SUM	
of instruction	Number of study hours	30.0	60.0	0.0	0.0		0.0	90	
	E-learning hours inclu	uded: 0.0	!		1		•		
Learning activity and number of study hours	Learning activity		ticipation in didactic sses included in study n		Participation in consultation hours		udy	SUM	
	Number of study hours	90		15.0		45.0		150	
Subject objectives	Students obtain competence in using methods of mathematical analysis (single variable calculus) and linear algebra, and knowledge how to solve simple problems that are found in the field of engineering.								
Learning outcomes	Course out	come	Subject outcome			Method of verification			
			Student uses various methods to solve systems of linear equations. Student analyzes and solves problems from the area of analytic geometry. Student applies the basic properties of derivatives. Student analyzes the properties of functions with the use of its first and second derivatives. Student applies basic formulas and techniques of integration to calculate indefinite integrals. Student uses basic operations on complex numbers. Student solves the ordinary differential equations of the first and second order.		[SU3] Assessment of ability to use knowledge gained from the subject				
	the profession of energy possibility of further of can think and act in a entrepreneurial mandefine priorities for the implementation of argroup task [K6_W01] has basic mathematics necessed describe the phenometo the processes of conversion and trans	ning and self-improvement in profession of energy and the sisibility of further education; a think and act in a creative and repreneurial manner; can interpriorities for the olementation of an individual or up task W01] has basic knowledge of thematics necessary to scribe the phenomena related the processes of energy exersion and transfer; uses ormation technology to solve		Student can use a computer programme to calculate a needed value. He knows what mathematical aparatus the programme uses to calculate the data. Assessment of ability to use knowledge gained in the different modules.		[SK2] Assessment of progress of work [SW1] Assessment of factual knowledge

Subject contents	Elements of linear algebra.					
Subject contents	Liements of linear algebra.					
	 Matrices and matrix operations. Determinants and their properties. Inverse matrix. Rank of a matrix. Systems of linear equations. 					
	Analytic geometry in 3-space.					
	 The vectors, dot product, cross product and triple scalar product and their applications. Equations of lines and planes Elementary functions.					
	 Linear function Quadratic function Polynomials Power function Exponential function Logarithmic function Cyclometric and trigonometric functions 					
	Sequences.					
	 Definition. Monotone sequences. Limit of a sequence. 					
	Differential calculus of one variable functions.					
	 Computing derivatives by formulas (incl. logarithmic derivatives) Applications differential calculus of one variable functions (monotonicity, concavity, extremas) approximating values by derivative Text exrecises Anti-derivate. The substitution method of integration and integration by parts. Integration of rational, trigonometric and irrational functions. application to phisics (velocity, acceleration). Definite integrals Application (areas, phisical appl. (force, mass, center of mass) 					
	Improper integrals.					
Decre mainife						
Prerequisites and co-requisites						
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade			
and criteria	Written final exam	40.0%	50.0%			
	Tests	50.0%	50.0%			
Recommended reading	Basic literature	W.W.Sawyer, What is Calculus Ab	out?, MAA Volume 2 (1962)			
		Rhonda Huettenmueller, College Algebra DeMYSTiFieD, McGraw-Feducation; 2 edition (December 27, 2013)				
		George B. Thomas, Jr., Ross L. Finney., Calculus and analytic geometry, Addison-Wesley Publishing Company; 7th edition (January 1988)

* Write a given vector by other vectors find the inverse matrix (to a given matrix). * solve matrical equation (using inverse matrix). * Find the equation of a line perpendicular to a plane Compute limits of given sequencies (using the sandwich theorem) Compute limits of sequencies (using roots, the 'e-type' sequencies). Compute limits of functions (rational functions, root functions). Determine asymptotes of a function. Calculate derivatives (using formulas) Determine the monotonicity of a function and find it's extreme values (using derivatives). Approximate value of a root (using derivatives). Find tangent line to the graph of a functions Evaluate an indefinite integral i.e. antiderivatives (by parts, by substitutions) Compute antidervatives for rational functions (using patrial fraction) Calculate definitive integral calculate areas and other phisical applic, (total force, center of mass) Improper integral (unbounded areas)		I
