

Subject card

Subject name and code	, PG_00056086						
Field of study	Mechanical and Medical Engineering						
Date of commencement of studies	October 2022		Academic year of realisation of subject			2024/2025	
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery			at the university	
Year of study	3		Language of instruction			Polish	
Semester of study	5		ECTS credits			4.0	
Learning profile	general academic profile		Assessment form			assessment	
Conducting unit	Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Magdalena Jażdżewska				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		0.0		0.0	45
Subject objectives	The aim of the course is to acquire knowledge about techniques, procedures, devices and research equipment, as well as the ability to perform microstructure tests, mechanical, physical, chemical, physicochemical and biological properties of metal, ceramic, polymer, composite and biolayers as well as biocoatings.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U07] he/she is able to identify the problem and list simple engineering tasks to solve this problem in practice, he/she is able to critically analyze the proposed technical solutions and conclude whether these solutions can be implemented to solve problems related to design of mechanical devices and mechanical-medical devices	The student is able to develop design assumptions for any medical device, especially an implant; assess the state of knowledge in this area on the basis of literature, clinical practice and patent databases; characterize the advantages and disadvantages of existing design solutions and the directions of research.	[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information
	[K6_U09] he/she is able to select proper constructive materials to design the device	A student is able to select biomaterials for a medical device, especially an implant, taking into account its conditions of use.	[SU5] Assessment of ability to present the results of task [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment
	[K6_W13] he/she has knowledge related to application of engineering approaches in medicine or application of medical devices and rehabilitation devices	Student is able to characterize and perform tests of mechanical properties of biomaterials, including tensile, compression, bending, torsion, fatigue, hardness and nanoindentation tests, as well as to assess whether their values are sufficient to produce a specific medical choice, especially an implant.	[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge
	[K6_W04] he/she has skills in the field mechanical testing of materials used in engineering and mechanical-medical area	The student has knowledge of the existing biomaterials and research methods adapted to the requirements that should be met by a given medical device, especially an implant; has knowledge of biomaterials and implants testing methods and is able to perform tests specified in standards or principles of good practice.	[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge
Subject contents	Characteristics and types of material tests. Mechanical properties tests: tensile, compression, bending, torsion, fatigue, nanoindentation tests. Physical properties tests: diffraction, magnetic and electromagnetic tests. Research on chemical properties; corrosion tests of various types. Characteristics and methods of testing metal biomaterials. Characteristics and methods of testing ceramic biomaterials. Characteristics and methods of testing polymer and carbon biomaterials. Characteristics and methods of testing composite biomaterials. Characteristics and methods of testing biolayers and biocoatings		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Exam for lectures	50.0%	50.0%
	Assessment of laboratory skills	50.0%	50.0%
