

## Subject card

Subject name and code	Mechanics , PG_00055374							
Field of study	Mechanical Engineering							
Date of commencement of studies	October 2022		Academic year of realisation of subject		2022/2023			
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific			
					research in the field of study			
Mode of study	Full-time studies		Mode of de	Mode of delivery		at the	university	
Year of study	1		Language of instruction		Polish			
Semester of study	2		ECTS cred	ECTS credits		9.0		
Learning profile	general academic profile		Assessme	nt form ex		exam	exam	
Conducting unit	Department of Mechanics and Mechatronics -> Faculty of Mechanical Engineering and Ship Technology							
Name and surname	Subject supervisor		prof. dr hab. inż. Marek Krawczuk					
of lecturer (lecturers)	Teachers		dr hab. inż. Wojciech Macek					
			mgr inż. Grzegorz Banaszek					
			prof. dr hab. inż. Marek Krawczuk					
			dr inż. Natalia Stawicka-Morawska					
			ui iiiz. ivalaila Sidwicka-iviotawska					
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
of instruction	Number of study hours	45.0	60.0	0.0	0.0		0.0	105
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity Participation in classes including plan					Self-study SUM		SUM
	Number of study hours	f study 105		9.0		111.0		225
Subject objectives	Theoretical and exer	cises in technic	al mechanics					

Data wydruku: 20.09.2024 03:34 Strona 1 z 3

In Inc. Mural processes knowledge on mechanical systems, istatics, including the processes of modelling mechanical systems, statics, knematics and dynamics of rigid objects and bask knowledge in the processes of modelling mechanical systems. In Inc. Mural processes of modelling mechanical systems in the processes and other resources, essential for solving engineering tasks; is able to complete the obtained information from specialized information processes. Sea able to complete the obtained information processes and phenomena occurring in mechanical devices with the mechanical systems. In the mechanical systems with the mechanical systems and phenomena occurring in mechanical devices with the mechanical systems. In the mechanical systems with the mechanical systems and phenomena occurring in mechanical systems with the mechanical systems. In the mechanical systems will be a system to the mechanical systems will be a system to the systems. In the systems will be a system to the systems will be a system to the systems of the systems of the systems. Student describes real systems of the systems. Student describes degrees of freedon, strengths and their reactions, and also statically will be a systems. Student describes degrees of freedon, strengths and their reactions, and also statically systems. Student characterizes conditions of equilibrium. Student characterizes conditions of equilibrium. Student characterizes conditions of equilibrium. Student characterizes on the systems of the centre of gravity. Student describes active and reactivity forces, as well as external and internal forces. Student characterizes on the systems of the centre of gravity. Student describes and the systems of process, and their sources, describes active and reactivity forces, as well as external and internal forces. Student characterizes conditions of equilibrium. Student characterizes conditions of equilibrium. Student characterizes conditions of equilibrium. Student charact	Learning outcomes	Course outcome	Subject outcome	Method of verification
information from specialized literary sources, databases and other resources, desemblases and other resources, desemblases and other resources, desemblases is able to compile the obtained opinion  IKR_U06] is able to use mathematical and physical models for analysing the processes and phenomena occurring in mechanical devices within the range of material strength, thermodynamics and fluid mechanics. Student recognizes menings ited a rigid body, dimension-less point, concentrated force. Student presents basic Newton's phrophese, primible notions and differentiales equilibrant forces; systems. Student characterizes the resultant force and the resultant momentum systems of forces. Student describes degrees of freedom, strengths and their reactions, and also statically determinate and indeterminate of conditions of equilibrium of spatial force systems. Student characterizes the resultant force and the resultant momentum systems of forces. Student describes degrees of freedom, strengths and their reactions, and also statically determinate and indeterminate of conditions of equilibrium of spatial force systems. Student characterizes the seather and reactivity and parallel. Student defines substitute conditions of equilibrium. Student characterizes types of forces, and their sources, describes active and reactivity force and coordinates of the centre of gravity. Student describes firction forces, rolling resistance, and bett drive friction. Student characterizes appraint force and displaced in the condition of the centre of gravity. Student describes printing and coordinates of the centre of gravity. Student describes firction forces, rolling resistance, and bett drive fircition. Student characterizes provity force and coordinates of pole into a coclerated motion, harmonic motion, crank-shaft system motion.  IKE JWO2] possesses an organized knowledge on physics, including classic mechanics, sources, coptos, electricity and mechanics of pole into a coclerated motion, harmonic motion, crank-shaft system motion.	[K6_W04] possesses knowledge on mechanics, including the processes of modelling mechanical systems, statics, kinematics and dynamics of rigic objects and basic knowledge on		Student describes real systems using physical and mathematical models. Student recognizes meanings: ideal rigid body, dimension-less point,	knowledge [SW3] Assessment of knowledge contained in written work and
mathematical and physical models under Subsigning the processes and phenomena occurring in mechanical devices within the range of material strength, thermodynamics and fluid mechanics  meanings of kinematics of point: position coordinates of point: position coordinates, velocity and acceleration, normal, and polar co-ordinates of point: position coordinates of point: position coordinates, velocity and acceleration, normal, and polar co-ordinates of point: mechanics  mechanics  mechanics  meanings of kinematics of particular systems linear track  motion, crark-shaft system motion  mechanics  meanings of kinematics  meanings of ki		information from specialized literary sources, databases and other resources, essential for solving engineering tasks; is able to compile the obtained information pieces and to interpret them, additionally is able to form conclusions and present justified		fulfilment [SU3] Assessment of ability to use knowledge gained from the
organized knowledge on physics, including classic mechanics, acoustics, optics, electricity and organized knowledge on physics, fundamentals to solve engineering problems related to the mechanical engineering area [SW1] Assessment of factual		[K6_U06] is able to use mathematical and physical models for analysing the processes and phenomena occurring in mechanical devices within the range of material strength, thermodynamics and fluid mechanics	using physical and mathematical models. Student recognizes meanings: ideal rigid body, dimension-less point, concentrated force. Student presents basic Newton's principles, primitive notions and axiom's of mechanics. Student differentiates equilibrant forces'; systems. Student characterizes the resultant force and the resultant momentum systems of forces. Student describes degrees of freedom, strengths and their reactions, and also statically determinate and indeterminate of systems. Student characterizes conditions of equilibrium of spatial force system, and particular systems: coplanar, concurrent, and parallel. Student defines substitute conditions of equilibrium. Student characterizes types of forces, and their sources, describes active and reactivity forces, as well as external and internal forces. Student characterizes gravity force and coordinates of the centre of gravity. Student describes friction forces, rolling resistance, and belt drive friction. Student characterizes basic meanings of kinematics of point: position coordinates, velocity and acceleration. Student recognizes: vector, Cartesian, normal, and polar co-ordinates of point kinematics. Student characterizes parameters of kinematics of particular systems: linear track motion, circle and ellipse track motion, uniform and uniformly accelerated motion, harmonic

Subject contents	Lectures/Tutorials					
	Modeling in mechanics: real system, physical and mathematical models, and also meanings of: ideal rigid body, dimension-less point, concentrated force. The basic Newtons principles, and primitive notions and axioms of mechanics. Equilibrant systems of forces. Resultant force of concurrent system of forces. Momentum of pair of forces. Sesultant force and resultant momentum of spair of forces. Degrees of freedom, strains and their reaction forces. Statically determinate and in determinate systems. Conditions of equilibrium. Formulas of superposition, and independence of force acting. Forces, and their sources. Division of forces: reactive and active, external and internal. Gravity force and coordinates of centre of gravity. Friction forces, rolling resistance and belt drive friction. Analysis of forces in bars of truss. Basic meanings in kinematics of point: position coordinates, velocity, acceleration, and equations of motion. Description of motion of point in: vector, Cartesian, normal, and polar coordinates. Analysis of kinematics parameters of particular systems: linear track motion, circle and ellipse track motion, uniform and uniformly accelerated motion, harmonic motion, crank-shaft system motion. Kinematics of the rigid body. Basic definitions: angular coordinates, velocities and accelerations of the body, and linear velocity and acceleration of the body. Dependency in-between velocities and accelerations of points of the body. Particular cases of the rigid body kinematics: transitional, rotational and coplanar motion. Description of coplanar motion as transitional and rotational motion superposition, and as rotational motion around contemporary center of velocity and center of acceleration. Analysis of kinematics parameters of planar and planetary toothed transmit boxes. Relative motion and Coriolis acceleration. Dynamics of inertial point in: Cartesian, polar, and normal coordinates. Particular cases of the principal point motion of: linear track motion, oblique projection motion, free motion in gravity					
Prerequisites	Phisics and mathematics on the secondary level school, including in particular: geometry, thrigonometry,					
and co-requisites	and also vector calculus.					
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade			
and criteria	Written exam	56.0%	50.0%			
Practical exercise		56.0%	50.0%
