

Subject card

Subject name and code	Production Planning and Control, PG_00055506						
Field of study	Mechanical Engineering						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	6	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Zakład Technologii Maszyn i Automatykacji Produkcji -> Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Stefan Dzionk					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		6.0		49.0	100
Subject objectives	The aim of the course is to provide with advanced techniques of production planning and control. Possibilities of sequencing and scheduling of orders in in computer integrated environment.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U09] is able to plan the manufacturing, assembly and quality control processes of typical constructions and mechanical devices, estimating their costs	The student is able to prepare a set of data indispensable in the production planning and control process. The student uses computer systems to obtain relevant data on the production planning and control process.			[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_U04] is able to perform a critical analysis of the existing technical solutions, present the specification of the technology of manufacturing basic construction elements of machines and engineering assemblies	The student prepares a paper on production planning and control issues for a simple enterprise model.			[SU5] Assessment of ability to present the results of task		
	[K6_W11] possesses knowledge on design, technology and manufacturing of machine parts, metrology, and quality control; knows and understands methods of measuring and calculating basic values describing the operation of mechanical systems, knows basic calculating methods applied to analyse the results of experiments	The student knows basic issues concerning production planning and control. The student uses the terminology used in production planning and control.			[SW1] Assessment of factual knowledge		

Subject contents	<p>LECTURE Computer integrated production planning and control systems. Technical and economic aspects of production control, production flow control essence, the basic principles of control, control norms, scheduling and load production stations, balancing tasks on production capacity, inter-cellular methods of production flow control, intracellular methods of production flow control, documentation associated with the production flow control, record and control of production flow. Other production control techniques. Trends in production planning and control.</p> <p>LABORATORY Products: product attributes, routing options, resources, set-up and operation times, operation attributes. Resources data: resources, secondary constraints, resources groups.</p> <p>PROJECT: Entering the orders. batching methods. calendar states and shift patterns. Sequencing the orders. Standard dispatching rules. Standard algorithmic rules. Schedule analysis. Reports. Gantt Chart. Order Trace Chart. Constraints plots.</p>														
Prerequisites and co-requisites															
Assessment methods and criteria	<table border="1"> <thead> <tr> <th data-bbox="456 577 794 607">Subject passing criteria</th> <th data-bbox="799 577 1137 607">Passing threshold</th> <th data-bbox="1142 577 1481 607">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="456 613 794 642">Project</td> <td data-bbox="799 613 1137 642">60.0%</td> <td data-bbox="1142 613 1481 642">35.0%</td> </tr> <tr> <td data-bbox="456 649 794 678">Written Exam</td> <td data-bbox="799 649 1137 678">60.0%</td> <td data-bbox="1142 649 1481 678">35.0%</td> </tr> <tr> <td data-bbox="456 685 794 714">Laboratory</td> <td data-bbox="799 685 1137 714">60.0%</td> <td data-bbox="1142 685 1481 714">30.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Project	60.0%	35.0%	Written Exam	60.0%	35.0%	Laboratory	60.0%	30.0%

Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. Control theory - basic terminology. 2. The company as a cybernetic system. 3. The essence of the production flow control. 4. Hierarchical control systems .. 5. The complexity of the production flow control. 6. The efficiency of the production flow control. 7. Control rules (AI-AIII, BI-BIII). 8. Control standards 9. Scheduling and workload 10. Methodology workload balancing of production capacity, 11. Methods for controlling the flow of intracellular production, 12. Methods for controlling the flow inside the cell for the production, 13. Task switching and principles central distribution works 14. Documentation related to the production flow control 15. Checking the progress of production: 16. Characterize task PPC systems. 17. Explain what the PPC systems available any role. 18. Introduce the basic concepts of production planning and control, the chosen concept discussed in detail. 19. Characterize the essential tasks of PPC systems. 20. Present the data types used in PPC systems and their characteristics. 21. Modern concepts of management and organization of production control, replace - selected to characterize. 22. Identify the main and auxiliary tasks PPC systems, taking into account levels of management. 23. Characterize the resources in the implementation process. 24. Discuss the results of the planning process. 25. Methods to characterize the short-term production planning. 26. Decisions production control systems. 27. Characterize the operational tasks of production control functions. 28. Discuss generations PPC systems. 29. To characterize the functional integration method PPC systems. 30. A split of list management functions of parts and materials, changes in the structure of the product, the types of parts lists. 31. Discuss ways of balancing material consumption and labour. 														
Work placement	Not applicable
