

关。GDAŃSK UNIVERSITY 多 OF TECHNOLOGY

Subject card

Subject name and code	Kinematics and dynamics of machines, PG_00055405								
Field of study	Mechatronics								
Date of commencement of studies	October 2022		Academic year of realisation of subject			2023/2024			
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Modo of dolivery				at the university		
Year of study	2		Mode of delivery			Polish			
Semester of study	3		Language of instruction ECTS credits			6.0			
Learning profile	s general academic profile		Assessment form			exam			
						ineerin	a and Ship Te	chnology	
Conducting unit Name and surname	Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology Subject supervisor dr hab. inż. Krzysztof Lipiński								
of lecturer (lecturers)	Teachers			rzysztof Lipińs					
		mgr inż. Grzegorz Banaszek							
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
of instruction	Number of study hours	30.0	30.0	0.0	15.0		0.0	75	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity Participation ir classes include plan				Self-study SUM				
	Number of study hours	75		6.0		69.0		150	
Subject objectives	Acquainting with definitions of the most fundamental terms: machine/mechanism; link; pair and kinematic chain. Overview of the commonly used mechanisms. Acquainting with the most important terms of structural analysis: classification of links and pairs; mobility, single-degree chains; functional and structural classification. Presentation of the most important methods of positions, velocities and accelerations problems. Presentation of methods of dynamics of mechanisms. Introduction to problems of free and forced vibrations of systems of one degree and of many degrees of freedom.								
Learning outcomes	Course out	Subject outcome			Method of verification				
	[K6_W04] has organized and theoretically supported knowledge in terms of general mechanics, strength of materials, theory of mechanisms and machine dynamics, fluid dynamics, hydraulics and pneumatics, machine construction and engineering graphics		has an ordered and theoretically founded knowledge about mechanics; theory of mechanisms; dynamics of machines; as well as knowledge about vibrations in mechanical systems			[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge			
	databases and other, properly choosen sources, integrate these infomration, interpret them, draw conclusions and formulate opinions		is able to obtain information in the field of general mechanics, theory of mechanisms and dynamics of machines and vibrations, using the literature, databases and other sources, is able to integrate the obtained information, interpret it, as well as draw conclusions and formulate and justify opinions			[SU1] Assessment of task fulfilment			
	[K6_U03] has self-learning skills		has the ability to self-study and to independently solve problems formulated in mechanics; theory of mechanisms and dynamics of machines; as well as in vibrations in mechanical systems			[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment			

Subject passing oriteria Passing threshold Percentage of the final grad colloquia with solving practical problems Assessment methods and criteria Subject passing oriteria Second problems 25.0% Assessment methods Example solution of the project 56.0% 25.0% Inde of final evaluation of the project 56.0% 25.0% Recommended reading Basic literature 1.1E. Metrovitch, Fundamentals of vibrations, McGraw Hill, 2001 eResources addresses Adresy na platformic eNauczanie: Kinematyka I dynamika maszyn, Wyklad, Mechatronika, Inzynierski sem3, zima 23/24 (PC, 20055405) - Moode ID: 34238 Kinematyka I dynamika maszyn, Wyklad, Mechatronika, Inzynierski sem3, zima 23/24 (PC, 20055405) - Moode ID: 34238 Kinematyka I dynamika maszyn, Wyklad, Mechatronika, Inzynierski sem3, zima 23/24 (PC, 20055405) - Moode ID: 34238	Subject contents	Machine and mechanism; the need of a simultaneous transfer of movement and force; The most important structural elements of machines and mechanisms; open and closed kinematic chains; classification of kinematic pairs; classification of kinematic links. Tasks of analysis and synthesis. Planning the trajectory. Direct and invert tasks. Overview of the most popular types of mechanisms. Functional classification; Structural analysis, mobility of mechanisms; structural equation of mobility of mechanisms; single-degree mobility of the kinematic chains; apparent constraints; local mobility; partial and complete mobility. Structural classification; family; structural group; class, order, and form of a structural group. Method of solving the task of studying positions, velocities and accelerations of elements of mechanisms. Diagrammatic, analytical and numerical methods. Methods of marked trajectory. Differentiation of constraint equations; kinematics of relative motion; plans of velocities and of accelerations; instantaneous centres of speed and acceleration. Dynamics of mechanisms: types of forces; methods used to mark the reaction forces; kinetostatics equations; resolving of forces in kinematic pairs; three-mass analogy; differential equations of motion of mechanisms; parameters reduced on the shaft. Balancing of planar mechanisms. Free vibrations of systems with one degree of freedom for systems with and without damping. Logarithmic decrement of damping. Correlation between the damping on the frequency of vibrations. Forced vibrations of systems with one degree of forced vibrations. Resonance (amplitude) and phase characteristics. Correlations between damping on the amplitude and phase characteristics. Initial conditions in case of forced vibrations. Free and forced vibrations for the existence of a non-trivial solution. Eigenvalues and eigenvectors of matrices.							
and criteria bolioquia with solving practical problems 56.0% 25.0% Indee of final evaluation of the project 56.0% 25.0% Inal test of final evaluation of the project 56.0% 25.0% Recommended reading Basic literature 1.
