| | Number of study hours | 45 | 4.0 | | 26.0 | | 75 | | |
| Subject objectives | The aim of the course is to familiarize students with the processes of bonding and cutting construction materials. They will also learn about the construction of devices used in joining processes and the elements of electrical engineering related to this area. | | | | | | | | |
| Learning outcomes | Course outcome | | Subject outcome | | | Method of verification | | | |
| | [K6_U08] can assess the usefulness of routine methods and tools for solving practical production tasks in measuring in order to supervise processes and analyze the functioning of production systems | | The student is able to choose the right bonding and cutting process in relation to the required application, which takes into account various groups of construction materials | | | [SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information | | | |
| | [K6_K01] feels the need for self-realization by learning throughout life, is looking for modern and innovative solutions in their actions, is able to think creatively and act in an entrepreneurial way | | Based on the input data of the actual bonding and cutting process, the student is able to analyze it properly in order to solve a practical application problem. | | | [SK5] Assessment of ability to solve problems that arise in practice [SK4] Assessment of communication skills, including language correctness | | | |
| | life cycle of products mechanical devices a in the field of machin manufacturing techni as the possibilities ar the development of n | re cycle of products and echanical devices and systems, at the field of machine parts nanufacturing techniques, as well as the possibilities and trends in the development of machines and roduction devices and process | | The student is able to choose the appropriate device for the implementation of a given bonding and cutting process. | | | [SW2] Assessment of knowledge contained in presentation | | |
| Subject contents | As part of the course, students learn the basic welding and cutting processes such as: MMA, TIG, MIG / MAG, SAW, OAW, brazing and soldering, oxygen cutting, plasma cutting, laser cutting. They learn about the construction of bonding devices and the main fundamental variables of the discussed processes together with elements of electrical engineering. | | | | | | | | |
| Drana mujaita a | Basic knowledge of materials science and electrical engineering is required | | | | | | | | |
| Prerequisites and co-requisites | | naterials scienc | e and electrica | al engineering i | s require | ed | | | |
| | | | <u> </u> | al engineering i | s require | | centage of the | final grade | |
| and co-requisites | Basic knowledge of m | | <u> </u> | | s require | | centage of the | final grade | |

| Example issues/ example questions/ tasks being completed | 1. Explain the concept of static characteristics of an arc \ 2. What is electric arc self-regulation 3. Explain the differences between the various bonding processes (welding, fusing, soldering) 4. What do the abbreviations SAW, TIG, MMA mean? 5. What type of device should be selected for plasma cutting of 5 mm thick stainless steel elements? 6. provide the main fundamental variables for the MIG / MAG welding process. 7. What is the distance of the electric contact to the base material and what is its influence on the welding process. 8. Explain the role of shielding gases. | | | |
| Work placement | Not applicable | | | |
